Hello.
Please see attached amendment #2 for permit #838 for 5 Monument Street Portland, ME. Liv's structural engineer, Chris Ray of Downeast Structural will be calling Brian Stephens tomorrow morning to discuss questions related to the structure as per Brian's request. It is my understanding that the entire amendment was already reviewed by all departments and there is only one question which remains in regards to the column on the southeast wall. The other comments that Brian mentioned (a note on 2x6 jack studs and detail on second floor deck, are clarified in this application)
Regards,
Gary Rockwood
