Juice Bar - 19 Exchange Street

PROJECT DESCRIPTION

We are opening a local inspired cold-pressed juice shop. The cold-pressed method of juice extraction is a slower process that requires shredding fruits and vegetables into a pulp and then pressing out the juice with tons of pressure.

We will be producing fresh fruit and vegetable juice blends and homemade nut milks daily and bottling it in 16oz glass bottles, which will then go in a grab and go refrigerator. We will also offer breakfast bowls (smoothies, oats, yogurt parfaits, etc) that will be made to order and put in to-go containers.

Design/Build Out

- Everything will be to-go style, therefore there will be NO customer seating.
- We will be putting up a non-bearing wall made of 2x4's and particle board with a window cut out to see into the kitchen. This wall will be blocked at the top and we will also include a pocket door to the right.
- Electrical layout will be submitted with a separate electrical permit application.
