Re: Portland Fish Exchange Evaporative Condenser

To Whom It May Concern,

Attached is the HVAC Permit Application for a replacement Evaporative Condenser that serves the refrigeration plant at the Portland Fish Exchange on the Portland Fish Pier. The existing tower has a non-repairable leak in the coil section.

The replacement tower is an exact replacement. All dimensions and weights are the same.

Given the nature of the importance of the refrigeration system to the overall day to day operation of the Fish Exchange anything you can do to move along the application would be greatly appreciated.

Thank you very much for your consideration in this matter.

Sincerely,

Andrew Kent
Project Engineer
