Subject: 131 Johnson Rd

Hi Jeanie,
Hopefully this will answer your questions:

Southern Maine Oral Surgery is a dental office that specializes in impacted and wisdom teeth removal, dental implants, bone grafting, jaw surgery and facial trauma. Most of this work is done under local anesthesia and the patient is in a self preservative state. When work is serious enough to require a surgery suite, the doctors will do the work at Maine Med or Mercy. They are also on call for emergency facial injuries and other oral emergencies which is also done at the hospitals.

The recovery rooms are used as after care rooms for immediate post surgical care. Moving the patient out of the chair and into a private area also allows the dental operatory to be readied for the next procedure.

Dave
