Dear Bill Hopkins,

The Brick North Building at the Forefront at Thompson's Point has been designed to meet the requirements of LEED Silver Certification using the LEED for Core & Shell v2009 rating system.

Thornton Tomasetti has been hired as the LEED Consultant for the Brick North Building. Based on our review of the Amended Site Renovation Plans dated July 2014 and the West Wing Tenant Fit-up Plans dated August 2014, the building and site have been designed to meet the requirements of LEED Silver Certification. It is worth noting that the Brick North Building will be submitted to the Green Building Certification Institute (GBCI) as one building that includes both wings (East and West wings). Once the design and layout of the East Wing is finalized, the East Wing Fit-up Plans will need to be reviewed from a LEED perspective to ensure that LEED Silver Certification can be achieved for the entire building.

Please do not hesitate to contact us if you have any questions.

Sincerely,

Jay Waterman, LEED AP BD+C, LEED for HOMES
