HIGH EFFICIENCY

Heat more with less fuel. The innovative heat exchanger in the Castle Serenity was modeled after the fins on air-cooled engines, which provides for 2.5 square feet of additional surface area for maximum thermal exchange in a compact space. The design is both unique and functional because it allows the inside of the stove to be smooth for easy cleaning and minimal ash build up, while exchanging an incredible amount of heat produced by the burning wood pellets. While other stoves are blowing your hard earned dollars outside, the Serenity stove keeps all of your warmth inside.

PROGRAMMABLE CONTROLLER

Adjust your heating needs to your lifestyle. The Serenity features a 24-hour programmable controller for each day of the week that has the ability to cycle on and off and adjust to a built-in thermostat depending on when heat is needed. The house can be warm when you wake up and when you come home from work, while remaining cooler during the day and at night while you sleep. Along with calendar and time based heating options, you can also set a local thermostat or manually set it on one of five burn levels. For added convenience, all controls can be programmed using the included remote control. The whisper-quiet fan offsets include speed controls to fine-tune the combustion to the pellets used, and to tailor the volume of heated air blown into the living space. Should there be an interruption, a full range of diagnostic modes help get you back up and

running. Should you have any unresolved issues our qualified customer service representatives car also use the controller diagnostics to solve it quickly.

EASY CLEAN

Cleaning pellet stoves is a must, but the Serenity makes it simple. Other stoves try to route hot gases through a maze of metal in order to exchange heat. This is good for exchanging heat, but terrible for effectively cleaning the stove. Eventually the maze of metal fills up with difficult-to-reach ash that impairs the stove's ability to transfer heat into your home. The Serenity Stove is designed to be easy to clean - there are no tubes, corrugations, or hidden chambers. There is no need to take

off panels or disassemble parts. Just simply cool the stove, dump the firepot and ash pan, dust off the inside panels and sweep out the exhaust pipe.

UNBEATABLE CUSTOMER SERVICE

Castle Stoves' service is unusual in the stove industry. There is no other company you can call directly and get a live person. All other manufacturers route you to the local dealer for questions, or tell you to read the manual more closely. Castle will answer product questions and do troubleshooting, as needed. If you don't believe it, give us a call at 800-345-6007, and our qualified customer service representatives are ready and happy to assist you.

IN-STOCK SERVICE PARTS

In the pellet stove industry, parts availability is not always the norm. However, at Castle Stoves we take customer service seriously and work tirelessly to ensure that all service parts are available year-round to meet our customer's needs. We are so good at it, even customers owning competing stoves call us for parts!
