The *Most Energy Efficient* Water Heating System

Hot water used for bathing and laundry accounts for nearly 25% of your home's energy bill. An energy efficient water heating system can save you hundreds of dollars each year. The ***AirTap Hybrid*** next generation of water heaters run on a fraction of the energy used by traditional water heating systems such as electric, gas or tankless so that every bath, shower or laundry costs significantly less.

Our ENERGY STAR® certified water heaters use advanced heat pump technology to extract heat from ambient air to provide hot water super-efficiently. Back-up resistance element ensures that households don't run out of hot water even when hot water demand is high. The ***AirTap Hybrid*** ATI66 model is the only water heater that meets Northern Climate Specification's stringent Tier 2 criteria by providing high levels of energy performance in cooler, northern climates.

UPGRADE

Your Electric Water Heater

Save Energy & Money

AirTap Hybrid water heaters use 70%* less energy compared to standard electric water heaters.

Experience a More Comfortable Home

AirTap Hybrid operates at a 48 decibel sound level, similar to a new quiet-run dishwasher.

Rebates & Tax Credits Available

Multiple rebates and tax credits available. For more information contact your local sales representative.

product features:

» High efficiency even in cold climate environment

» Heat Pump rated at 9,000 BTU

» Supplemental heating from 4kW resistance element

» Heats water up to 135°F

» Stainless Steel 304 construction (inside and out)

» Easy to use control panel with multiple operation modes:
- Econ (Heat pump only)
- Auto (Heat pump and resistance element)
- Heater (Resistance element only)

» Available in 66 and 80 gallon versions

» 6" top exhaust duct (double vent version with air intake ducting option also available)

» 10-year limited warranty (lifetime warranty on tank)

» Intelligent controls and error management

» Emergency back-up heating system

**ENERGY STAR® Residentail Water Heaters: Final Criteria Analysis 2008, Energy Consumptions in Therm units are converted to KWH, AirTap Hybrid has 2.40 Energy Factor (EF) as per EnergyStar. The energy consumption of AirTap is adjusted accordingly*
