Close up top view showing clearances

3" Selkirk pellet stove pipe connects to a Selkirk 3" to 6" pipe adapter. The adapter connects to a Selkirk double-wall thimble designed to pass through a combustible wall. This thimble connects to the insulated 2-ply stainless steel liner running up the chimney flue. It's overspec'd, I know, but very safe.

All pipes and thimbles are Selkirk brand and will be installed accorading to manufacturer's requirements. All Selkirk pellet pipes are rated to 1" clearance to comustibles.

The Castle Serenity stove is rated for a 5" clearance in the back and 7" clearance on the sides. Installation will certainly abide by these clearances.
