Sign installation details

Sign to be manufactured out of aluminum framing, steel support pole and lexan faces.

(1) 6" x 6" steel pole will attach through the center of the sign. It will keep the sign 3' from grade, this section of the pole will be hidden with an aluminum shroud.
(2) The pole will then extend into the ground a Minimum of 4' to get below the frost line. It will be set in a hole that will then be filled with concrete.
