To whom it may concern
WGME TV is proposing to add two satellite antennas to be located in an existing WGME parking area. Five parking spaces are involved and are located at the (right side) rear of the building near an existing embankment. The proposed location is not in a fire lane. The space is part of WGME's property used for employee parking. The antennas will be place as close to the existing banking as possible. The mounts used to support the satellite antenna are a" non-penetrating design". They will sit on the existing surface."

Each antenna has an 18'-8"x 18'-8" foot print taking up a combined total of approximately 722 square feet as there needs to be some separation between the two antennas.

I've included documentation for the mounting frame structure for the antennas and site pictures with dimensions. I also superimposed the antennas in the parking space location to help visualize how it will look when completed.

I hope I've proved all that is needed for this project if not or if you have any questions please call me at 207-756-1571

Best Regards,
Craig Clark
