S-5-E and S-5-E Mini

The S-5-E clamp is designed specially for double-folded standing seam roof profiles having the appropriate dimensioning. This clamp is also the one recommended for Butler's MR24™.

Although a bit smaller and less expensive than the S-5-U, for these profiles, the S-5-E is just as strong.
Click here for seam details.

For horizontal seams under .5" crimp the seam to 180 degrees at desired clamp location. This illustration demonstrates crimping technique, NOT actual location of clamp.

The S-5-E and S-5-E Mini clamps are each furnished with the hardware shown above. Each box also includes a bit tip for tightening setscrews using an electric screw gun. A structural aluminum attachment clamp, the S-5-E is compatible with most common metal roofing materials excluding copper. All included hardware is stainless steel.
