GENERAL NOTES

1. All work shall be in accordance with the Maine State Plumbing Code, local codes and ordinances, National Fire Code (NFPA), or these plans or specifications, whichever is more strict.

2. All drawings are schematic only, and are intended to indicate the intent, extent, and general arrangement of work. They are not meant to show every fitting, change of direction or every situation. Verify locations in the field. Work indicated shall be furnished complete to perform the function intended.

3. Carefully coordinate the space requirements and location of piping with the other trade contractors. If coordination fails, conflicts will be decided in favor of the other contractors with this contractor relocating his piping and equipment at no expense to the Owner.

4. This contractor shall make all final plumbing connections to equipment/ fixtures provided by other contractors.

5. For pipe sizes not shown on floor plans: refer to adjacent or enlarged plumbing plans, then appropriate schedules, details, diagrams, specifications, and equipment/ fixture connection sizes. For otherwise indeterminable pipe segments, the size shall be the same as the largest adjacent segment. Pipe sizes are nominal (not O.D.) unless specifically noted otherwise.

6. All piping shall run concealed above ceilings, in walls, in soffits and in chases unless noted otherwise.

7. No structural members shall be cut without approval of the Architect.

8. All plumbing shall be supported from the building structure. All piping 2" and larger shall be supported from the top chord of bar joists. All piping drops to fixtures shall be anchored solid to walls with a steel support bracket with adjustable clip.

9. All water piping shall be installed parallel to building lines and pitched to low points. Provide drain-offs at low points. Piping shall be run neatly grouped together when practical.

10. All piping through roofs, masonry walls and partitions shall have steel pipe sleeves. Openings between pipes and sleeves shall be caulked and sealed smoke and water tight. All pipe penetrations through a fire rated wall or floor shall be cast iron, steel or copper and rated to match the rating of the wall, as per the NFPA.

11. All wall fixtures shall be carrier mounted unless otherwise specified.

12. All storm and domestic water piping, unless buried or specified otherwise, shall be insulated.

13. Run all water piping on warm side of building insulation. No water, waste or storm lines shall be run in exterior walls, unless directly indicated.

14. Provide shock absorbers as shown on drawings and where required to avoid water hammer, sizes shall conform to P.D.I. standards.

15. All sanitary waste piping less than 3" shall pitch down at ¼" per L.F. All 3" and larger piping shall pitch at ⅛" per L.F. whenever possible. The piping main from where it enters the building to the furthest point in the system shall pitch down at ⅛" per L.F. unless indicated otherwise. No sanitary/ waste piping under slab shall be less than 2" in diameter.

ABBREVIATIONS & SYMBOLS

ADA	AMERICANS WITH DISABILITIES ACT
AFF	ABOVE FINISHED FLOOR
AP	ACCESS PANEL
BFF	BELOW FINISHED FLOOR
BFP	BACKFLOW PREVENTER
BLV	BALL VALVE
CI	CAST-IRON
CO	CLEANOUT
CFF	CAPPED FOR FUTURE
CNTR	COUNTER
CTE	CONNECT TO EXISTING
CU	COPPER
CW	COLD WATER
C&HW	COLD & HOT WATER
