ANN-80-W Annunciator

ANN-80-W is a compact, backlit, 80-character LCD annunciator that can be used to announce wireless-specific events. It connects to the W-DIS-D Wireless Display Driver using a two-wire serial interface employing the ANN-BUS communication format. Two additional wires from the host FACP are required for power. Any wireless-specific events (such as low battery), will announce a general trouble at the FACP and specific information on the ANN-80-W.
