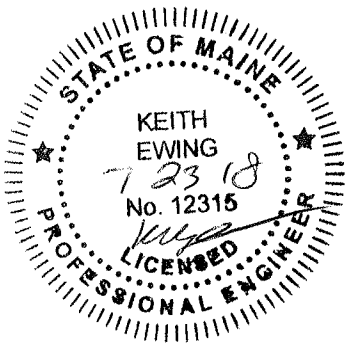
MEMORANDUM



Project No.: 17077
Project Name: TPI Harris Containers

To: Review team
From: Keith Ewing, PE
Date: July 18, 2018
Re: 93 Washington Ave. – Follow up
Cc:

1. A plumbing permit application was not submitted.
    a. The Plumber has a plumbing permit pulled - PLUMB2018-00164.
    b. The Electrical permit is – ELEC2018-00347.

2. There isn't a copy of a Notice to Proceed issued by the TPI to the Applicant for the planned construction.
    a. Attached is a copy of the letter sent with the application for the building permit application on from May 1 2017. It was assumed the City had a copy. There is also a copy of the letter releasing the client to construct the project.

3. The photographs are not time dated. There also seems to be uncertainty about the identification of the photos (one of the photos for plumbing is marked with a question mark).
    a. The Photos were taken during a progression of site visits. The question mark is a wrong key stroke on the key board. Attached are the photos from Certification and associated date.
        i. Photo 1 – 5-10-18
        ii. Photo 2 – 5-10-18
        iii. Photo 3 – 4-13-18
        iv. Photo 4 – 4-13-18
        v. Photo 5 – 4-13-18
        vi. Photo 6 – 5-15-18
        vii. Photo 7 – 5-03-18
        viii. Photo 8 – 5-03-18
        ix. Photo 9 – 6-06-18
        x. Photo 10 – 6-06-18
        xi. Photo 11 – 6-06-18
        xii. Photo 12 – 5-10-18

4. Regarding the Inspection Report requirements, with exception of the special inspections, no description exists of each Code item reviewed for compliance and non-compliant items corrected.
    a. The attached blank 2009 IBC plan review record it is used as a guide line on reviewing

all Third Party Inspection projects. These sheets give us the items that we need to review on plans and on site. It includes the specific items to be reviewed for each chapter of the code. From the area requirements of the building to walls and finishes. The specific containers were reviewed at rough steel framing including the welds (chapter 22), Rough framing is reviewed for each container as shown in the photos of the report (chapter 23). The plumbing and electrical are inspected for each container as rough in work progresses (Maine state Plumbing and NFPA 70). Once the roughs in inspections were completed then the insulation was installed and inspected (Energy code), the certificate is included below. Once sheet rock was installed the taping was inspected as installed (Chapter 8 and 25). The final inspection of units at the factory is the one for finished units with paint and final electrical. Each container is inspected as the container units are completed.

5. The letter from Michael Falvey mentions only a final inspection for a modular bathroom facility there are 6 units, no dates or types of inspections performed and results before the final.
    a. Only unit #6 has a bathroom unit in it. The rough in was reviewed as well as the final.

6. Kern Butler's certificates are more complete. Do the certificate dates = the dates of inspection?
    a. These certificates are dated the final rough in inspection and final inspection.

7. The attached certificate is signed by Aaron Cook did not sign his report.
    a. An updated certificate was included.

8. The certification label does not identify the applicable building code and year.
    a. Second page states the insulation meets IBC 2009, 2012 and 2015.

APPENDIX A

Certification Letter to City From May 1, 2017

Certification Letter for release of project to Cotton Street Holdings, May 1, 2017

RE: 93 Washington Ave – TPI Inspection

Dear Mr. Russell,

My name is Keith Ewing, I am a structural Engineer and my Third Party Inspection number is 204.

I have been asked to perform the Third Party Inspection for Cotton Street holdings new facility located at 93 Washington Ave. I have worked with Snap Space on other projects as the Structural Engineer and Third Party Inspector. I am familiar with their methods and construction practices.

I have reviewed the drawings G1-0, G1-1, A0-1, A1-1, A2-0, A2-1, A3-0, A4-0, A7-0 and A7-1. And the site plans of the projects.

I am anticipating working directly with the Electrition and Plumbing Installers on this project. As the client has not had plumbing and Electrical drawings produces.

IF you have any problems with me doing the Third Party Inspections please let me know.

Sincerely

Keith Ewing

Keith Ewing, PE, TPI

RE: 93 Washington Ave – TPI Inspection

Dear Mr. Harris,

My Third Party Inspection number is 204.

I have reviewed the drawings G1-0, G1-1, A0-1, A1-1, A2-0, A2-1, A3-0, A4-0, A7-0 and A7-1. And the site plans of the projects. The drawings meet the Maine Uniform Building and Energy Code.

I am anticipating working directly with the Electrician and Plumbing Installers on this project directly. A licensed Plumbing inspector and Electrical Inspector will be working on this project.t

It is okay to release the project to construction.

Sincerely

Keith Ewing

Keith Ewing, PE, TPI

APPENDIX B

Guide for site review

2009 INTERNATIONAL BUILDING CODE®
PLAN REVIEW RECORD

Plan Review #_____
Date: _____
Valuation: _____
Fee: _____

JURISDICTION: _____
(City, County, Township, etc.)

BUILDING LOCATION: _____
(Street address)

BUILDING DESCRIPTION: _____

_____

REVIEWED BY: _____

Numerals indicated in parenthesis are applicable code sections of the 2009 *International Building Code*. The plan review accomplished as indicated in this record is limited to those code sections specifically identified herein. This record references commonly applicable code sections. It does not reference all code provisions which may be applicable to specific buildings. This record is designed to be used only by those who are knowledgeable and capable of exercising competent judgement in evaluating construction documents for code compliance.

NOTES: N.R. — Not required
N.A. — Not applicable

ADMINISTRATION (Chapter 1)

_____ Complete construction documents *(107.1, 107.2)*

_____ Signed/sealed construction documents *(107.1, State laws vary)*

BUILDING PLANNING (Chapters 3, 4, 5, 6)

OCCUPANCY CLASSIFICATION (302 - 312, 508)

_____ Single Occupancy *(302.1)*

_____ Mixed Occupancy *(508.1)*

_____ Incidental accessory occupancies *(508.2.5, Table 508.2.5)*

_____ Accessory occupancies *(508.2)*

GENERAL BUILDING LIMITATIONS (Chapters 5 & 6)

_____ Address identification *(501.2)*

Apply Case 1 to determine the allowable height and area and permitted types of construction for a building containing a single occupancy or nonseparated mixed occupancies. Apply Case 2 to determine the allowable height and area and permitted types of construction for a building containing separated mixed occupancies.

AREA MODIFICATIONS TO TABLE 503

Allowable tabular area, A_t *(Table 503)* 1

Area Increase Factor due to frontage, I_f *(506.2)* +

Area Increase Factor due to automatic sprinklers, I_s *(506.3)* +

Conversion factor =

Frontage *(506.2)*

North	East	South	West
_____	_____	_____	_____

Total Frontage *(F)* _____ ft. Perimeter *(P)* _____ ft.

Width of open space *(W)* = _____

Area Increase Factor due to frontage, I_f = _____ *(506.2)*

$$I_f = \left[\frac{F}{P} - 0.25\right]\frac{W}{30}$$

CASE 1 — SINGLE OCCUPANCY OR NONSEPARATED MIXED OCCUPANCIES (508.3)

Using Table 503, identify the allowable height and area of the single occupancy or the most restrictive of the nonseparated mixed occupancies. Construction types that provide an allowable tabular area equal to or greater than the adjusted building area and allowable heights (as modified by Section 504) equal to or greater than the actual building height are permitted.

DETERMINE CONSTRUCTION TYPE

Actual building area _____ ft^2

Adjusted building area _____ ft^2
actual building area ÷ conversion factor

Actual building height _____ feet _____ stories

Allowable building height _____ feet _____ stories

Permitted types of construction _____

Type of construction assumed for review *(602.1)* _____

CHECK ALLOWABLE AREA (506.4)

Allowable area per floor *(A_a)*

_____ × _____ = _____ ft^2
conversion factor; tabular area *(Table 503)*

Total floor area (all stories) _____ ft^2

Allowable floor area (all stories)

_____ × _____ = _____ ft^2
Allowable area per floor *(A_a)*; number of stories (maximum 3)

Compliance verified _____

CASE 2 — SEPARATED MIXED OCCUPANCIES (508.4)

Using Table 503, identify the allowable height and area of each of the separated occupancies within the building. Construction types that provide, for each story of the building, tabular areas (as modified by Section 506) which result in a sum of the ratios of 1.00 or less and allowable heights (as modified by Section 504) equal to or greater than the actual height of the occupancy are permitted.

Story	Group	Actual floor area	Adjusted floor area*	Actual height	Allowable height
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories
_____	_____	_____ ft^2	_____ ft^2	_____ ft _____ stories	_____ ft _____ stories

Area ratio (single floor) $= \sum \frac{\text{Adjusted floor area *}}{\text{Allow. tab. area, } A_t \text{ (Table 503)}} =$ _____ + _____ + _____ + _____ = _____ ≤ 100

*Adjusted floor area = actual floor area ÷ conversion factor

CHECK ALLOWABLE AREA (506.5)

Three stories or less buildings _____

Four or more story buildings (Total area ratio ≤ 3) _____

Permitted types of construction _____

Type of construction assumed for review *(602.1)* _____

Compliance verified _____

MEZZANINES (505)

_____ Area limitation *(505.2)*

_____ Egress *(505.3)*

_____ Openness *(505.4)*

_____ Equipment platforms *(505.5)*

UNLIMITED AREA BUILDINGS (507)

_____ Nonsprinklered, one story *(507.2)*

_____ Sprinklered, one story *(507.3)*

_____ Two story *(507.4)*

_____ Reduced open space *(507.5)*

_____ Group A-3 buildings *(507.6, 507.7)*

_____ Group H occupancies *(507.8)*

_____ Aircraft paint hangar *(507.9)*

_____ Group E buildings *(507.10)*

_____ Motion picture theaters *(507.11)*

_____ Covered mall buildings/anchor stores *(507.12)*

SPECIAL PROVISIONS (509)

_____ Special condition applicable *(509.1)*

_____ Compliance verified

SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY (Chapter 4)

COVERED MALL AND OPEN MALL BUILDINGS (402)

_____ Egress *(402.4)*

_____ Mall width *(402.5)*

_____ Unlimited area *(402.6)*

_____ Fire separations *(402.7)*

_____ Interior finish *(402.8)*

_____ Automatic sprinkler system *(402.9)*

_____ Standpipe system *(402.9.1)*

_____ Smoke control *(402.10)*

_____ Kiosk requirements *(402.11)*

_____ Playground structures *(402.12)*

_____ Security grilles and doors *(402.13)*

_____ Standby power and emergency voice/alarm *(402.14, 402.15)*

_____ Plastic signs *(402.16)*

_____ Fire department access *(402.17)*

HIGH-RISE BUILDINGS (403)

_____ Construction *(403.2)*

_____ Automatic sprinkler system *(403.3)*

_____ Smoke detection *(403.4.1)*

_____ Fire alarm system *(403.4.2)*

_____ Emergency voice/alarm systems *(403.4.3)*

_____ Emergency responder radio coverage *(403.4.4)*

_____ Fire command center *(403.4.5)*

_____ Smoke removal *(403.4.6)*

_____ Elevators *(403.6)*

_____ Standby power *(403.4.7)*

_____ Emergency power *(403.4.8)*

_____ Stair remoteness *(403.5.1)*

_____ Additional stairway *(403.5.2)*

_____ Stairway doors *(403.5.3)*

_____ Smokeproof exit *(403.5.4)*

_____ Luminous egress path *(403.5.5)*

ATRIUMS (404)

_____ Use *(404.2)*

_____ Automatic sprinkler system *(404.3)*

_____ Fire alarm system *(404.4)*

_____ Smoke control *(404.5)*

_____ Enclosure *(404.6)*

_____ Standby power *(404.7)*

_____ Interior finish *(404.8)*

_____ Travel distance *(404.9)*

OTHER SPECIAL USE AND OCCUPANCY

_____ Underground structures *(405)*

_____ Motor-vehicle-related occupancies *(406, 509)*

_____ Group I-2 *(407)*

_____ Group I-3 *(408)*

_____ Motion picture projection rooms *(409)*

_____ Stages and platforms *(410)*

_____ Special amusement buildings *(411)*

_____ Aircraft-related occupancies *(412)*

_____ Combustible storage *(413)*

_____ Hazardous materials *(307.1, 414)*

_____ Groups H-1, H-2, H-3, H-4 and H-5 *(415)*

_____ Application of flammable finishes *(416)*

_____ Drying rooms *(417)*

_____ Organic coatings manufacturing *(418)*

_____ Live/work units *(419)*

_____ Groups I-1, R-1, R-2, R-3 *(420)*

_____ Hydrogen cutoff rooms *(421)*

_____ Ambulatory health care facilities *(422)*

_____ Storm shelters *(423)*

FIRE PROTECTION (Chapters 6, 7, 8, 9)

FIRE-RESISTANCE-RATED CONSTRUCTION (Tables 601 & 602 and Chapter 7)

Note: Entry in ☐ indicates required rating in hours. NC indicates noncombustible construction required.

_____ Construction classification *(602)*

COMBUSTIBILITY (602.2, 602.3, 602.4, 602.5, 603)

_____ Exterior walls

_____ Interior elements

_____ Roof

FIRE-RESISTANCE RATINGS AND FIRE TESTS (703)

_____ Ratings / Combustibility *(703.2, 703.4)*

REPORT SUBJECT:
Gaco F1850 Spray-applied Polyurethane Insulation

1.0 SCOPE OF EVALUATION

This Research Report addresses compliance with the following Codes:

- 2015, 2012, and 2009 *International Building Code®* (IBC)
- 2015, 2012, and 2009 *International Residential Code®* (IRC)
- 2015, 2012, and 2009 *International Energy Conservation Code®* (IECC)

Gaco F1850 has been evaluated for the following properties:

- Physical properties
- Surface-burning characteristics
- Thermal resistance
- Air permeability
- Air Barrier
- Vapor permeance
- Water-resistive barrier
- Alternative to thermal barriers
- Alternative to ignition barriers
- Use in Types I, II, III, and IV construction
- Use in Type V construction
- Duct insulation

See Table 1 for applicable Code sections related to these properties.

NOTE: This report references 2015 Code sections with [2012] and [2009] Code sections shown in brackets where they differ.

2.0 USES

Gaco F1850 spray-applied polyurethane foam insulation is used as a nonstructural thermal insulating material on or in interior and exterior walls, floors, ceilings, and roofs.

Under the IRC, the insulation may be used as air-impermeable insulation when installed in accordance with Section 3.2.3.

The insulation may be used as an air barrier when installed as described in Section 3.2.4.

The insulation may be used as vapor retarder as described in Section 3.2.5.

The insulation may be used as a water-resistive barrier on exterior walls as described in Section 3.2.6.

The insulation may be used in Types I, II, III, IV, and V construction. When used in exterior walls in Types I, II, III, and IV construction (IBC), the wall construction must be in accordance with Section 4.5.

The insulation may be used as duct insulation material when installed as described in Section 4.6.

3.0 DESCRIPTION

3.1 Materials:

3.1.1 Gaco F1850: Gaco F1850 insulation is a closed cell, medium-density, polyurethane foam plastic. The insulation is a two-component, spray-applied foam plastic with a nominal in-place density of 2.1 pcf. The insulation is produced in the field by combining a polymeric isocyanate (A component) with a resin (B component). The insulation liquid components are supplied in 55-gallon drums and 250-gallon totes, and must be stored at temperatures between 50°F and 100°F. The resin (B component) must be protected from freezing

temperatures. Gaco F1850 insulation has a shelf life of 1 year on the polymeric isocyanate (A component) and 6 months on the resin (B component) when stored in factory-sealed containers at these temperatures.

3.1.2 DC315 Intumescent Coating: DC315 intumescent coating, manufactured by IFTI, Paint to Protect, is a water-based coating supplied in 5-gallon pails and 55-gallon drums. The coating material has a shelf life of 24 months when stored in factory-sealed containers at a temperature between 41°F to 95°F. DC315 complies with ICC-ES AC456 as recognized in Intertek CCRR-1076.

3.2 Performance Characteristics:

3.2.1 Surface Burning Characteristics: The insulation, at a maximum thickness of 4 inches and a nominal density of 2.1 pcf, has a flame-spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84. Thicknesses of up to 9-1/2 inches in ceilings and floors, and 7-1/2 inches in vertical surfaces, are recognized based on full scale fire performance testing in accordance with NFPA 286. When the insulation is separated from the interior living space of the building with minimum 1/2 inch thick gypsum board, the maximum thickness is not limited.

3.2.2 Thermal Resistance: The insulation has thermal resistance (R-value) at a mean temperature of 75°F as shown in Table 2.

3.2.3 Air Permeability: Gaco F1850 insulation, at a minimum thickness of 1 inch, is considered air-impermeable insulation in accordance with 2015 IBC Section 1203.3 [not applicable under the 2012 and 2009 IBC] or IRC Sections R202 and R806.5 [2009 - R806.4], based on testing in accordance with ASTM E2178.

3.2.4 Air Barrier: Gaco F1850 insulation, at a minimum thickness of 1 inch, is considered an air-barrier material in accordance with IECC Section C402.5.1.2.1 [C402.4.1.2.1], based on testing in accordance with ASTM E2178.

The insulation, at a minimum thickness of 1 inch, is also considered an air barrier assembly in accordance with IECC Section C402.5.1.2.2 based on testing in accordance with ASTM E2357. Window and door penetrations must be flashed in accordance with manufacturer's installation instructions and the air barrier assembly must conform to IECC Section C402.5.1.1.

3.2.5 Vapor Permeance: Gaco F1850 has a vapor permeance of less than 1 perm (5.7×10^{-11} kg/Pa-s-m^2) at a minimum thickness of 0.44 inch and may be used where a Class II vapor retarder is required by the applicable Code.

3.2.6 Water-resistive Barrier: Gaco F1850 may be used as an alternative to the water-resistive barrier specified in IBC Section 1404.2 and IRC Section R703.2 when installed at a minimum of 1 inch thickness on exterior side of exterior wall sheathing.

4.0 INSTALLATION

4.1 General:

Gaco F1850 must be installed in accordance with the manufacturer's published installation instructions, the applicable Code, and this Research Report. The manufacturer's published installation instructions and this Research Report must be strictly adhered to, and a copy of the instructions must be available on the jobsite during installation.

4.2 Application:

Gaco F1850 insulation is spray-applied on the jobsite using a volumetric positive displacement pump as identified in the Gaco Western application instructions. The insulation must be applied when the ambient temperature is greater than 32°F. The insulation must not be used in areas that have a maximum in-service temperature greater than 200°F. The foam plastic must not be used in electrical outlet or junction boxes or in contact with water, rain or soil. The foam plastic must not be sprayed onto a substrate that is wet, or covered with frost or ice, loose scales, rust, oil, or grease. The insulation must be protected from the weather during and after application. The insulation may be applied to the maximum thickness in a single pass.

4.3 Thermal Barrier:

4.3.1 Application with a Prescriptive Thermal Barrier: Gaco F1850 insulation must be separated from the interior living space of the building by an approved thermal barrier of 1/2 inch thick gypsum board or an equivalent 15-minute thermal barrier complying with, and installed in accordance with, IBC Section 2603.4 or IRC Section R316.4. Exceptions are provided in Sections 4.3.2 and 4.4.

When the insulation is separated from the interior living space of the building with minimum 1/2 inch thick gypsum board, the maximum thickness is not limited.

4.3.2 Application without a Prescriptive Thermal Barrier: Gaco F1850 insulation may be installed without the 15-minute thermal barrier prescribed in IBC Section 2603.4 and IRC Section R316.4, when installed as described in this section. The thickness of the foam plastics insulation applied to the underside of the roofs, ceilings, or floors must not exceed 9-1/2 inches, and applied to vertical wall surfaces must not exceed 7-1/2 inches. The insulation must be covered on all exposed surfaces with DC315 intumescent coating at an application rate of 1.1 gallon per 100 sq. ft. to achieve a nominal wet film thickness of 18 mils (dry film thickness of 12 mils). The coating must be applied over the insulation in accordance with the coating manufacturer's instructions and this report. Surfaces to be coated must be dry, clean, and free of dirt, loose debris, and other substances that could interfere with the adhesion of the coating. The coating is applied with low-pressure airless spray equipment.

4.4 Attics and Crawl Spaces:

The insulation may be applied in attics and crawl spaces as described in either Section 4.4.1 or 4.4.2. When foam insulation is installed in an attic or crawl space in accordance with this section, a thermal barrier, as described in Section 4.3.1, is not required between the foam plastic insulation and the attic or crawl space but is required between the insulation and the interior living space.

4.4.1 Application with a Prescriptive Ignition Barrier: When Gaco F1850 insulation is installed within attics and crawl spaces where entry is made only for service of utilities, the ignition barrier must be installed in accordance with IBC Section 2603.4.1.6 or IRC Section R316.5.3 or R316.5.4, as applicable. The ignition barrier must be consistent with the requirements for the type of construction required by the applicable Code and must be installed in a manner so the foam plastic insulation is not exposed. Gaco F1850 insulation as described in this section may be installed in unvented attics in accordance with IBC Section 1203.3 or IRC Section R806.5 [2009 - R806.4] at a minimum thickness of 1 inch.

4.4.2 Application without a Prescriptive Ignition Barrier:

4.4.2.1 General: Gaco F1850 insulation may be installed in attics and crawl spaces, without the ignition barrier prescribed in IBC Section 2603.4.1.6 and IRC Sections R316.5.3 and R316.5.4, subject to the following conditions:

a. Entry to the attic or crawl space is only to service utilities, and no storage is permitted.
b. There are no interconnected attic or crawl space areas.
c. Air in the attic or crawl space is not circulated to other parts of the building.
d. Under-floor (crawl space) ventilation is provided when required by IBC Section 1203.4 [1203.3] or IRC Section R408.1, as applicable.
e. Attic ventilation is provided when required by IBC Section 1203.2 or IRC Section R806, except when air-impermeable insulation is permitted in unvented attics in accordance with IBC Section 1203.3 [not applicable under the 2012 and 2009 IBC] or IRC Section R806.5 [2009 - R806.4].
f. Combustion air is provided in accordance with IMC (International Mechanical Code) Section 701 [Sections 701 and 703].

Gaco F1850 is an air-impermeable insulation and may be installed in unvented attics, as described in this section, in accordance with 2015 IBC Section 1203.3 or IRC Section R806.5 [R806.4], when applied at a minimum thickness of 1 inch.

4.4.2.2 Application of Insulation: Gaco F1850 insulation may be spray-applied to the underside of the roof sheathing and/or rafters in attics; the underside of wood floors in crawl spaces; and to vertical surfaces in both attics and crawl spaces, as described in this section. The thickness of the foam plastics applied to the underside of the top of the space must not exceed 10 inches, and to vertical

surfaces must not exceed 8 inches. The insulation may be installed without prescriptive ignition barrier required by IBC Section 2603.4.1.6 or IRC Section R316.5.3 and R316.5.4 or a protective coating.

4.4.2.3 Use on Attic Floors: Gaco F1850 insulation may be installed exposed (no coating) at a maximum thickness of 10 inches between and over the joists in attic floors. The insulation must be separated from the interior living space by an approved thermal barrier. The insulation may be installed without the prescriptive ignition barrier required by IBC Section 2603.4 and IRC Section R316.5.3 or protective coating.

4.5 Exterior Walls in Types I, II, III, and IV Construction:

Gaco F1850 may be installed in exterior walls of buildings of Types I, II, III, and IV construction complying with IBC Section 2603.5 and as described in the section. Intertek Design Listings GWL/FI 30-01 and GWL/FI 30-02 describe the assemblies tested and certified by Intertek as complying with NFPA 285. The test wall assemblies were extended to include various wall constructions described in Tables 3 and 4 through a third-party engineering analysis. The potential heat of the foam plastic in any portion of the wall must not exceed 7142 Btu/ft^2.

4.6 Duct Insulation:

Gaco F1850 may be applied to residential ducts in attics and crawl spaces in compliance with IRC Section M1601.3. The insulation must be protected in accordance with the ignition barrier requirements of either Section 4.4.1 or 4.4.2.

5.0 CONDITIONS OF USE

The Gaco F1850 described in this Research Report complies with, or is a suitable alternative to, what is specified in those Codes listed in Sections 1.0 and 2.0 of this report, subject to the following conditions:

5.1 Installation must comply with this Research Report, the manufacturer's published installation instructions, and the applicable Code. In the event of a conflict between the manufacturer's instructions and this report, this report governs.

5.2 The insulation must be separated from the interior living space of the building by a thermal barrier as described in Section 4.3, except as described in Sections 4.3.2 and 4.4.

5.3 The insulation must not exceed the thicknesses noted in Sections 3.2, 4.3, 4.4, and 4.5 as applicable.

5.4 Use of the insulation in Types I, II, III, and IV construction must be as described in Section 4.5.

5.5 Use of the insulation in areas where the probability of termite infestation is "very heavy" must be in accordance with IRC Section R318.4 or IBC Section 2603.8 [2012 - 2603.9] [2009 - 2603.8], as applicable.

5.6 Jobsite certification and labeling of the insulation must comply with IRC Section N1101.10 [2012 – N1101.12] [2009 – N1101.4] and IECC Sections C303.1 or R303.1 [2009 – 303.1], as applicable.

5.7 The insulation is produced in Waukesha, Wisconsin, under a quality control program with inspections by Intertek Testing Services NA, Inc. (AA-647).

6.0 SUPPORTING EVIDENCE

6.1 Reports of tests in accordance with: ASTM C518, ASTM E84, ASTM E2178, ASTM E2357, ASTM E96, ASTM C411, NFPA 285, and NFPA 259.

6.2 Data in accordance with the ICC-ES Acceptance Criteria for Spray-applied Foam Plastic Insulation (AC 377), dated April 2016, including reports of test in accordance with Appendix X.

6.3 Research Reports for evaluation of data in accordance with ICC-ES Acceptance Criteria for Fire-protective Coatings Applied to Spray-applied Foam Plastic Insulation Installed without a Code-prescribed Thermal Barrier (AC456), dated October 2015.

6.4 Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Sheathing Panels used as Water-Resistive Barriers (AC71), approved February 2003, editorially revised January 2016.

6.5 Intertek Listing Report "Gaco F1850 Spray-Applied Polyurethane Foam Insulation".

6.6 Priest & Associates Consulting Letter Report No. 10318B, dated July 22, 2015.

7.0 IDENTIFICATION

The A and B components of the insulation are identified with the manufacturer's name (Gaco Western, LLC), address and telephone number, the product name (Gaco F1850), use instructions, the flame spread and smoke-development indices, the lot number, the Intertek Mark, and the Code Compliance Research Report number (CCRR-1043).

8.0 OTHER CODES

This section does not apply.

9.0 CODE COMPLIANCE RESEARCH REPORT USE

9.1 Approval of building products and/or materials can only be granted by a building official having legal authority in the specific jurisdiction where approval is sought.

9.2 Code Compliance Research Reports shall not be used in any manner that implies an endorsement of the product by Intertek.

9.3 Reference to https://bpdirectory.intertek.com is recommended to ascertain the current version and status of this report.

TABLE 1 – PROPERTIES EVALUATED

PROPERTY	IBC SECTION[1]	IRC SECTION[1]	IECC SECTION[1]
Physical properties	Not required	Not required	Not required
Surface-burning characteristics	2603.3	R316.3	Not applicable
Thermal barrier/ignition barrier	2603.4	R316.4	Not applicable

[1] Section numbers refer to 2015 Codes with 2012 and 2009 Codes in parentheses where different

TABLE 2 – THERMAL RESISTANCE (R Values)[1,2,3]

THICKNESSES (inches)	R-VALUE (°F.ft^2.h/Btu)
1	6.5
2	14
3	21
3.5	25
4	29
5.5	40
6	43
7.25	52
8	58
9.25	67
10	72
11.25	81

[1] R-values are calculated based on tested K-values at 1 inch and 3.5 inch thicknesses.
[2] R-values greater than 10 are rounded to the nearest whole number.
[3] To determine R values for thickness not listed:
a. Between 1 inch and 3.5 inch can be determined through linear interpolation; or,
b. Greater than 3.5 inches can be calculated based on R 7.2/inch

TABLE 3 – NFPA 285 COMPLYING WALLS WITH GACO F1850 ON EXTERIOR

WALL COMPONENTS	MATERIALS
Base wall system Use either 1, 2 or 3	1. Concrete Wall 2. Concrete Masonry wall 3. One layer of 5/8 in. thick Type X gypsum wallboard installed on the interior side of minimum 3-5/8 in. deep, minimum No. 20 gage steel studs spaced a maximum of 24 in. on center (OC) with lateral bracing every 4 ft. vertically.
Floorline Firestopping	Mineral wool (4.0 lb/ft^3 density) friction fit in each stud cavity and at each floorline.
Cavity Insulation Use wither 1, 2 or 3	1. None 2. Full cavity depth or less of Gaco F1850 applied using sheathing as substrate and covering the width of the cavity and inside of the stud flange. 3. Any noncombustible insulation (batts can be either faced or unfaced).
Exterior sheathing Use either 1 or 2	1. 1/2 in. thick exterior gypsum sheathing 2. 5/8 in. thick Type X exterior gypsum sheathing
Exterior insulation Use either 1 or 2	1. None 2. Gaco F1850 with a total maximum thickness of 4 in.
Exterior Veneer Use either 1, 2, 3, 4 or 5	1. Brick: Standard type brick veneer anchors installed a maximum of 24 in. OC vertically in each stud. Maximum 2 in. air gap between exterior insulation and standard nominal 4 in. thick clay brick. 2. Stucco: Minimum 3/4 in. thick, exterior cement plaster and lath. A secondary water resistive barrier can be installed between the exterior insulation and the lath. The secondary water resistive barrier shall not be full-coverage asphalt or butyl-based self-adhered membranes. 3. Minimum 2 in. thick natural stone (granite, limestone, marble and sandstone). Any standard non-open-jointed installation technique can be used. 4. Minimum 1-1/2 in. thick artificial cast stone. Any standard non-open-jointed installation technique can be used. 5. Minimum 1-1/4 in. thick Terra Cotta non-open jointed. Any standard non-open-jointed installation technique can be used.

TABLE 4 – NFPA 285 COMPLYING WALLS WITH GACO F1850 IN WALL CAVITY ONLY

WALL COMPONENTS	MATERIALS
Base wall system Use either 1, 2 or 3	1. Concrete wall 2. Concrete masonry wall 3. One layer of 5/8 in. thick Type X gypsum board installed on the interior side of minimum 3-5/8 in. deep, minimum No. 20 gage steel studs spaced at a maximum of 24 in. with lateral bracing every 4 ft. vertically.
Floorline Firestopping	Mineral wool (4.0 lb/ft^3 density) friction fit in each stud cavity and at each floorline.
Cavity Insulation	1. Full cavity depth or less of F1850 applied using sheathing as substrate and covering the width of the cavity and inside of the stud flange.
Exterior sheathing	5/8 in. thick Type X exterior gypsum sheathing
Exterior wall covering Use either 1 or 2	1. Any noncombustible exterior wall covering material 2. Any combustible exterior wall covering system that has successfully been tested in accordance with NFPA 285.
