HOME OWNER / INSTALLER FOR YOUR SAFETY

THIS MANUAL MUST BE READ IN ITS ENTIRETY BEFORE OPERATING HEATER

RHFE-556FA II/FTRA II

ENERGYSAVER GAS DIRECT VENT WALL FURNACE

Owner's Operation and Installation Manual

WARNING: IF THE INFORMATION IN THIS MANUAL IS NOT FOLLOWED EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.

WHAT TO DO IF YOU SMELL GAS

- DO NOT TRY TO LIGHT ANY APPLIANCE.
- DO NOT TOUCH ANY ELECTRICAL SWITCH; DO NOT USE ANY PHONE IN YOUR BUILDING.
- IMMEDIATELY CALL YOUR GAS SUPPLIER FROM A NEIGHBOR'S PHONE. FOLLOW THE GAS SUPPLIER'S INSTRUCTIONS.
- IF YOU CANNOT REACH YOUR GAS SUPPLIER, CALL THE FIRE DEPARTMENT.

INSTALLATION AND SERVICE MUST BE PERFORMED BY A QUALIFIED INSTALLER, SERVICE AGENCY OR THE GAS SUPPLIER.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the Rating Plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

Rimmai

INSTALLER: MUST LEAVE MANUAL WITH UNIT AFTER INSTALLATION. OWNER: RETAIN THIS MANUAL SAFELY, FOR FUTURE REFERENCE.

GAS PRESSURE SETTING PROCEDURE

Check and ensure SW6 Dip Switches are correct for the gas type for which the appliance is to be used. (Refer to diagram below.)

		SW6 DIP SWITC
	NG	OFF OFF OFF
556FAII/ FTRAII		1 2 3 4 ON ON OFF OFF
*	LPG	
		1

2. There are two test points, one on the manifold. one on the gas control assembly. Connect pressure gauge to both test points. Using an electronic manometer, connect the O side to the manifold test point. (Refer to data plate for pressure.)

GAS SUPPLY PRESSURE

	NATURAL	PROPANE
MINIMUM	5"W.C.	8"W.C.
MAXIMUM	10.5"W.C.	13"W.C.

- Press the ON/OFF button to operate the appliance.
- With appliance operating, press SW5 once.
- Press SW4 to operate appliance on forced low. Adjust the setting to the correct pressure using the "A" and "V" buttons on the control panel.

 6. Press SW4 again to lock in the selected setting.
- 7. Press SW3 to operate appliance on forced high. Adjust the setting to the correct pressure using the "A" and "V" buttons on the control panel.

 8. Press SW3 again to lock in the selected setting.
- 9. Press SW5 once to return heater to normal operation.
- 10. Press the ON/OFF button to turn the appliance off.
- 11. Remove the gauge from the test points and replace the test point screws.
- 12. Test for gas escapes.
- · The minimum and maximum inlet gas supply pressures are for the purpose of input adjustment.
- · Heaters may be converted from one gas to another using Rinnai conversion kits. (See page 62)

LOCATION / CLEARANCES

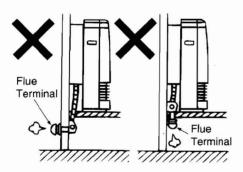

When positioning the heater the main points governing the location are:

- 1. Flueing
- 2. Warm air distribution

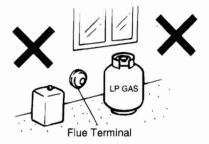

This heater is not designed to be build in.

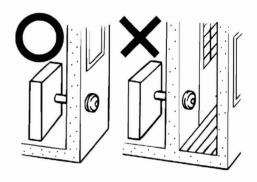

The flue is not designed to be positioned under floors, or below the level of the heater.

The flue terminal should be positioned away from flammable materials.

Do not flue into natural draught flues or fireplaces, this unit can only be used with one of the five types of Rinnai flue kits. Do not flue unit into other rooms. Flue terminal must be outside.

Flue may be positioned directly under opening windows, with a minimum clearance of 9 " (230mm).

FLUE SIZES:

- 5 Flue lengths are available.
- S flue walls 3"~4 1/2" (75~115mm)
- A flue walls 4 1/2"~9 1/2" (115~240mm)
- B flue walls 9 1/2"~15 3/4" (240~400mm)
- C flue walls 15 3/4 "~23 5/8" (400~600mm)
- D flue walls 23 5/8 " \sim 31 1/2" (600 \sim 800mm)

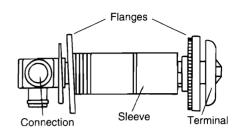

SLEEVE AND MANIFOLD INSTALLATION

METHOD FOR STANDARD WALLS

1. Disassemble Manifold from Sleeve.

The flue consists of 3 parts, sleeve, inside connectors and tube, outside terminal; (dis-assembly by pulling hard on outside terminal and inner connections, then pull sleeve off outer terminal.)

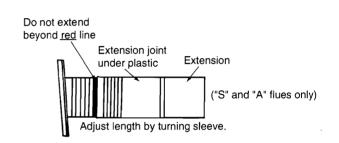

NOTE: Clearance to combustibles for terminal assembly sleeve and flanges is 0".

2. Adjustment of Sleeve Length.

Measure wall thickness through previously drilled 3 1/8" (80mm) hole.

End of sleeve should protrude 3/16 " $\sim 3/8$ " ($5\sim 10$ mm) from outside wall. Adjust sleeve length to wall thickness plus 3/16" "3/8" ($5\sim 10$ mm). (Sleeve is threaded for adjustment.) Do not extend beyond red line.

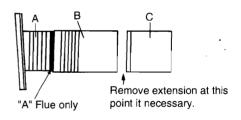

3. For S and A flue only.

Depending on flue set and wall thickness extension piece "C" may need to be removed.

Cut plastic, remove extension, then follow instruction 2. This applies to "S" and "A" flues only.

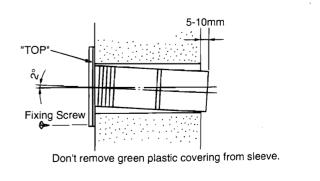

There is no extension on other flues, they can be fully adjusted by turning the threaded section.

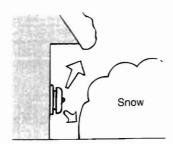

4. Fixing Sleeve.

Fix to the wall, using the 3 screws provided.

NOTE: The flange is marked "TOP", sleeve must be fitted with this mark **Up**. Check sleeve protrudes 3/16" $\sim 3/8$ " ($5 \sim 10$ mm) on the outside.

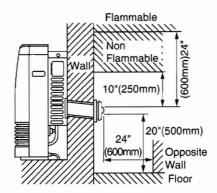

SNOW AREAS

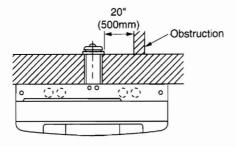

In areas subject to heavy snowfall, keep snow clear of flue terminal at all times.

STANDARD INSTALLATION OF FLUE MANIFOLD.

Diagram below shows minimum clearances and distances from obstructions.
Also check local regulations.

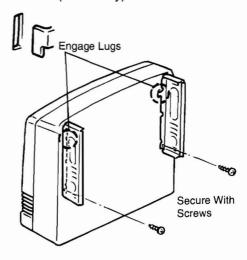

Side Clearances

FIT BACK COVERS (SIDES ONLY)

Fit back covers (sides only) as shown below.

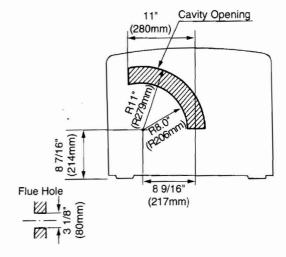

5. Check rubber seal is in place on terminal. *For weather board walls, add spare rubber seal Terminal seal (Add "weather board provided to compensate for weather board angle. seal here) 6. Installation of Terminal TOP" mark "A" From outside, insert terminal into sleeve with the "A" Label mark at the top. Left hand side fixing tie is marked "LEFT" (from inside). Fixing tie **Terminal** 7. Attached Ties Cut (leave 20mm free) Pull hard on left and right hand side ties, clip ties over lugs inside sleeve. You should be able to pull ties 2 or 3 slots past the starting point. Cut the ties, leaving Pull hard about 3/4" (20mm) past the lugs. Bend ties so they are parallel with the wall. Fixing tie Terminal Slèeve 8. Insert Inner Connection Assembly. Push assembly into the terminal tube, make sure "TOP" mark is uppermost. Fix with 3 screws provided. Inner Connections 9. Manifold can still be turned after attaching. Outlet Rubber cap Inlet

VENT LOCATION

FLUE MANIFOLD POSITION

Center of hole for flue manifold can be drilled anywhere within the shaded area. (To avoid studs, etc.)

FOR WEATHERBOARD WALLS DRILL THROUGH CENTER OF WEATHER BOARD FROM OUTSIDE, THEN DRILL FROM INSIDE THROUGH PLASTER-BOARD.

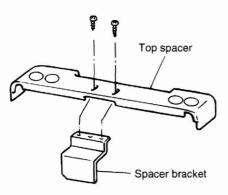

Before drilling the flue hole, check for water and gas pipes as well as electric cables. Use a 3 1/8" (80mm) drill for hole through wall.

WALL MOUNTING BRACKETS

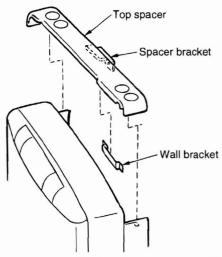

Place top back spacer in position. Mark the position of the top edge of the top space on the wall. Move the heater away from the wall. Mark center lines 1 1/8" (30mm) down from the top edge mark, and 1 9/16" (40mm) in front the left and right hand sides of the top spacer. Attach wall brackets at the marked position.

FITTING TOP SPACER + WALL CLIP

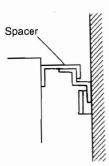

Tighten all screws.

SECURE HEATER TO WALL

Replace top spacer, clipping the spacer into the wall brackets at the same time as attaching it to the heater. Secure top spacer with the screws provided. THE HEATER IS NOW SECURED TO THE WALL.

Replace fan filter.
