Dear Neighbor,

I want to fill you in on some of the specifics and timing of the beginning of construction for our project. Our current plan is to mobilize on site and begin construction on the 7th of April. It may take as much as the first week to get organized, deal with utilities and other site issues. The first major work that we will do is the demolition of the existing building. I suspect that this will begin on or around the 14th. The demo of the wood framed building should take about 2 days with some more time dedicated to some alterations of the existing foundation. I will be able to be more specific as the time gets nearer. This work will be closely monitored by my general contractor, Wright-Ryan Construction, and myself to be sure there is no impact on neighboring properties. I am always available to answer questions. Feel free to contact me.
