I am following up our phone conversation regarding installation of fire doors at 20 Atlantic Street. This is a 100+ year old building with odd sized doors and intricate moldings which makes installation of fire doors very expensive. I had understood that installing fire doors was only required if major renovations were done and have had multiple fire inspections since I purchased this property and have not been cited for fire doors in the past.

However, as you have advised me that fire doors are required I propose to replace two doors per year until all apartments have the required fire doors. Please let me know if this plan is acceptable.
