RE: Sewer/Drain Permits for 35 India Street

To Whom It May Concern:

Upon inspection of the sewers in front of the "breakaway", it was determined that capping of drains would be best achieved after the building is down and access to the drains under the bar portion of the building can be gained. I will plug and grout both drains/sewer lines with muniballs, and grout as required. Ecoclean will inspect and record the sealing of both lines.

I discussed this with Jim Sloan and he was in agreement that it would be an acceptable solution to the issues we confronted when Ecoclean inspected the 18" line closest to the breakaway.

The apartments at 35 India Street are 4" cast inside the building and 6" clay at the main, making the plug method at the main difficult, but we should be able to get a 6" plug through the line to the main.

The other drain/sewer at the "bar" runs into the sewer main on the far side of the street and was not accessible without excavation to the street or sidewalk. Once the building is down I will dig up the drain/sewer and plug-grout the line.

If I can be of further assistance, please call.

Sincerely,

Mark Hall
207-318-2100
207-797-7407

Lines will be plugged by 4.15.07

The following information is to be considered as the design plan for the specific project that is being worked on.

All work will be done in accordance with OSHA & Maine DEP Chapter 425 rules and regulations

Scope of work:

LnFt of Thermal System Insulation

SqFt of FT/Mastic/Carpet/Lino

Ceiling Removal

SqFt of Boiler/Breeching

Whole Component Removal?

Other: Specify:

Project Design Information:

- ✓ Mobilize Site
- ✓ Erect "Caution " & "Keep out" Signage to regulate staging area
- ✓ Pre-Clean Work Area
- ✓ Install 1 layer Critical Barrier over all openings
- ✓ Construct 2-Layer poly Containment
- ✓ Construct 1-Layer poly Containment
- ✓ Erect "Danger Asbestos" tape to regulate work area
- ✓ Construct 3-Stage Worker Decon
- ✓ Establish Reduced Airflow in containment
- ✓ Construct Remote Decon Unit

Electrical:

Use Existing power supply

Use Power panel board

Electrician will install power

Use Roto-Phase

Worker Protection:

- ✓ Use Protective Suits
- ✓ Use Proper respirator
- ✓ Use Proper Footwear

Removal Procedures:

- ✓ Properly Wet Material being removed
- ✓ Use leak tight containers for waste
- ✓ Fine Clean Work Area
- ✓ Visual Inspection of Work Area
- ✓ Wash Floors with TSP
- ✓ Run (2) Air Samples & Take to closest lab
- ✓ Air Samples Via Independent –
- ✓ Demobilize Work Area

AIR MONITORING PROGRAM

Background Monitoring

Prevalent fiber levels in the proposed work areas shall be assessed through ambient air sampling and will involve at least two area samples per work area.

Monitoring During Asbestos Abatement

Area monitoring shall be conducted during asbestos abatement activities within the asbestos control area to include, but not limited to, sampling in the following locations:

If at any time during the abatement, airborne fiber concentrations outside of the containment exceed 0.01 fibers per cubic centimeter of air, the abatement shall cease until the contamination is identified and resolved.

Visual Inspection of the Work Areas

The work area shall not be air clearance sampled until a successful visual evaluation is completed.

The visual evaluation by the Industrial Hygienist/Air Monitor shall comply with *Maine DEP CMR 425.10 (D)(1)*.

Air Clearance Sampling

The Industrial Hygienist/Air Monitor shall conduct air clearance sampling in accordance with *Maine DEP CMR 425.10 (D)(2)*.

Two (2) air clearance samples shall be collected from the negative pressure enclosure.

Collection and analysis of air clearance samples will be performed in accordance with NIOSH Method #7400.

After the Industrial Hygienist/Air Analyst gives clearance, the Contractor will remove the containment polyethylene and dispose of it as contaminated waste.

The Contractor shall also remove all tools, equipment, barrier tape, signs, and waste from the work area.
