Guardian Systems of Maine 21 Rice St., Unit #2 Portland, ME 04103

207-536-4800

To Whom It May Concern:

Please note that a fire alarm inspection is an assessment of the conditions of the fire alarm system at the date and time of the inspection. This is only a test of the existing devices and is not a code assessment. Some of the devices may not be tested because of accessibility or another vendor is required to provide a complete test such as a sprinkler vendor, suppression system vendor, or an elevator vendor. This should be noted on the inspection report.

If a device is listed as tested, then it has triggered the appropriate alarm condition at the fire panel as per manufacturing specifications and NFPA-72 only. All of the local audio/visual devices will be tested with one or more devices only. The audio/visual devices will not be activated for each individual initiating device unless noted on the inspection report accordingly.

If the device is only visually inspected, then the inspector has only examined the device from a distance to determine if it seems intact. This is no assessment of functionality.

If a device is not connected to the system at the time of the inspection, then this will be noted. This device has not been assessed for functionality on the current fire alarm system.

Lastly a fire alarm device can fail at any time. It is important that the user of the system check the alarm panel's display once week as a minimum as per NFPA-72. Any trouble conditions should be reported to the service provider as soon as possible. Any physical change to the system such as removal of a device or damage to a device should be reported to your service provider immediately. In addition, depending on the physical change, the fire department should be notified immediately.

Please note we would be happy to provide an assessment of the existing conditions of the building for an additional fee. Please call our office and make arrangements.

Thank you for the chance to be your service provider.
