250 Commercial Street
Portland, Maine 04101

Dear Jennifer;

The proposed size of the double sided electric sign would be 51" wide by 18" tall. It will be constructed out of aluminum extrusion and painted with Matthews polyurethane paint. You may choose the color of the sign. We will letter the polycarb face with your logo and maybe a phone number if space allows.

We will construct an aluminum angle frame work within the sign cabinet in order to mount the sign directly to the building. We will use 3/8" stainless steel sleeve anchors to mount the sign to the building. We will also attach a 1/4" stainless steel aircraft cable from an attachment on the front of the sign cabinet back to two painted galvanized cleats attached to the building with stainless steel sleeve anchors.

Please call if you have any questions.
