---

Jeanie,

I got your voicemail and do apologize for the confusion on the occupant load calculations on the cover sheet for the Press Hotel. When I was reacting to the FPE review and to your comments on the Plumbing Code calculations, I was not thorough enough in my editing and left a few items unchanged while I changed others.

Attached is a revised cover sheet with revised occupant load calculations. I have listed the meeting rooms twice so that I can give the load for the plumbing code and the load for egress calculation separately since Marriott makes me use the 7 SF per person for egress.

I have sub-divided the lobby into two segments: one is the "lounge" area, which includes all open area and the flex space room. The remainder is office and restroom which I have called "accessory to R-1", which it is.

Again, sorry to make this more complicated than it needed to be. I hate issuing and re-issuing so many times. I will call you to follow up in a little while.

I am still waiting on a couple of mechanical engineering items for the Fire Pro review response, and may need to ask for you and Capt. Pirone to move those items to the conditions letter if I don't get his details within the next hour or so.

Thanks,

**Kevin Gough, Architect**
