Rev. 2/DACT-UD: Intelligent Addressable FACP with Optional 2nd Loop

Fire•Lite Alarms
by Honeywell

General

The Fire•Lite MS-9600 is a compact, cost-effective, intelligent addressable fire alarm control panel with a capacity of 318 addressable Fire•Lite devices on one Signaling Line Circuit (**SLC**) or a total of 636 addressable points with an optional second loop (**SLC-2**). An optional modem (**DACT-UD**) is available for remote site upload/download and/or remote monitoring.

Each Signaling Line Circuit (SLC) loop supports up to 159 addressable detectors including photoelectric, photoelectric with heat, ionization, photoelectric duct, fixed heat, fixed heat with rate-of-rise, and fixed high-heat detectors. It also supports up to 159 addressable modules including monitor (two-wire detector, normally open devices), dual-monitor functions (two monitor circuits from one module, two addresses used), control (for Notification Appliance Circuits), and relay (two Form-C) modules. The panel uses surface-mount technology and is designed for ease of installation, programming, and maintenance. It features the latest in advanced fire protection technology, including maintenance alert and automatic detector test functions.

WIRING REQUIREMENTS

The SLC requires use of a specific wire type to ensure proper circuit operation. It is recommended that all SLC wiring be twisted-pair shielded to minimize the effects of electrical inter-ference. Wire size should be no smaller than 18 AWG (0.821 mm²) and no larger than 12 AWG (3.31 mm²). The wire size depends on the length of the SLC circuit. Use the table below to determine the specific wiring requirements for the SLC.

Wire Requirements	Distance in Feet (m)	Typical Wire Size
Twisted-pair, shielded	10,000 feet (3,048 m)	12 AWG (3.31 mm²): Belden 9583, Genesis 4410, Signal 98230, WPW D999.
Twisted-pair, shielded	8,000 feet (2,438 m)	14 AWG (2.08 mm²): Belden 9581, Genesis 4408, Signal 98430, WPW D995.
Twisted-pair, shielded	4,875 feet (1,486 m)	16 AWG (1.31 mm²): Belden 9575, Genesis 4406 and 4606, Signal 98630, WPW D991.
Twisted-pair, shielded	3,225 feet (983 m)	18 AWG (0.821 mm²): Belden 9574, Genesis 4402 and 4602, Signal 98300, WPW D975.
Untwisted, unshielded	3,000 feet (915 m)	12 – 18 AWG (3.31 – 0.821 mm²).

- Optional 4XTMF module (conventional reverse polarity/city box transmitter).

Field-Programming Features

OFFLINE PROGRAMMING: Create the entire program in your office using a Windows®-based software package *(order programming kit **PK-CD**, containing PK-Plus, separately).* Upload/download system programming locally to the MS-9600 in less than one minute.

AUTOPROGRAMMING: Command the MS-9600 to program itself (takes less than 30 seconds). In the Auto-Program mode, the MS-9600 scans for all possible devices at all addresses, stores the device types, and addresses found, and then loads default values for all options (General Alarm). It also checks for two or more devices set to the same address.

ONLINE EDIT: While still providing fire protection, the MS-9600 may be programmed from the front panel. Simple menu trees displayed on the LCD allow the trained user to perform all functions without referring back to the programming manual.

ENGLISH LABEL LIBRARY: Quickly select labels from a standard library of more than 50 adjectives/nouns, such as "FLR 3 HALLWAY," or enter custom labels letter-by-letter. Use recall function to repeat previously used label.

PROGRAM CHECK: Automatically catch common errors, such as control modules not linked to any zone or input point.

Maintenance Alert

The MS-9600 continuously monitors each smoke detector and is capable of reporting maintenance conditions. This reduces the risk of false alarms due to dust accumulation. Refer to the control panel installation manual for more information.

Automatic Test Operation

The MS-9600 performs an automatic test of each detector every two hours. Failure to meet the test limits causes an AUTO TEST FAIL trouble type. System Reset clears this trouble.
