Hello,

Please see the attached Building Permit Application for a wireless telecommunications upgrade (co-location) on the roof of One City Center, on behalf of Redzone Wireless. The scope of work involves the placement of one equipment cabinet in an existing equipment room on the 14th floor, and 3 new antennas on the existing 40' rooftop tower, with associated cabling through existing cable pathways. I was advised by your department that many portions of this application are not applicable (fire protection, site plan, Certificate of Design, Accessibility Building Code Certificate), and have removed them from this application.

Attachments are:

- Signed Building Permit Application
- Construction Drawings
- Lease Agreement with Amendment between site Owner and Lessee
- Structural Analysis

Please let me know if any additional documents or forms are required. I will call the Inspection Office tomorrow to make the payment, as requested.

Also, could you please advise me on the expected lead time for this application? We would like to complete this job in the next week or two, if possible.

Thank you!

Ryan Rodel
