

# ForceField® FireGuard E-84® Intumescent Paint For Gypsum/ Wood/ OSB

#### **Application Conditions**

**Generic Type** Water-based intumescent coating designed for the fire

protection of gypsum and wood.

**Description**Thin film intumescent coating that creates a fire retardant and fire resistant barrier on a wide range of building surfaces

including gypsum, wood, and steel (see tech data sheet for

steel).

Listed and certified by Guardian Fire Test Laboratories Inc.

Features -ASTM E-119 ASTM E-84 Tested

-Decorative Finish- Gives a smooth decorative finish.

-Can be top-coated to color choice.

-Can be brushed on, rolled on, or sprayed on

-Durable finish- Provides a hard, impact and abrasion

resistant surface

-Topcoat finishes smooth

-Thin film coating- space saving footprints

-Low VOC content -LEED compliant

Color White Finish Smooth

**Primers** Can be used as a finished coat or a primer.

For interior space a topcoat is optional. For exterior Topcoats applications the material must be top coated with a

applications the material must be top coated with an impermeable exterior coating. The choice of topcoat will depend on project requirements and mil thickness of intumescent coating. FireGuard E-84® Intumescent Coating must be allowed to cure for 4-5 days prior to the application of a topcoat. Application must be protected from the elements until topcoat is in place. When applying a top coat, dry mil applications thickness to achieve a desired rating may

change.

Citati

Wet Film Thickness Up to 25 - 30 mils per coat

Dry Film Thickness Up to 13.5 - 16.2 mils per coat

Solids Content

By volume 54%

Coverage rate 866ft²/Gal at 1mil

86ft²/Gal at 10mil 28.9ft²/Gal at 30mil

Allow for loss in mixing and application.

VOC Content 3.6 g/l

**Limitations** Not for use on exterior environments or for interior steelwork

that will be exposed to freeze/thaw cycling or long-term surface temperatures over 140°F (60°C) in normal use

without the use of a suitable topcoat.

#### **Substrates & Surface Preparation**

**General** Prior to application surfaces need to be cleaned by removing

all oil, grease or any loose particles that may interfere with

the bond of ForceField® FireGuard®. It is highly recommended to prime drywall substrates before the

application of FireGuard E-84®.

On wood substrates where the wood is extremely old and dried out, it will be necessary to scrape off any old flaking off

paint (if painted) and prime the surface before the

application of FireGuard E-84®.

#### Performance Data

Standards Tested To	Results	
ASTM 2768 / ASTM E-84 30 min Extended	Flame Spread- 0 Smoke Index- 5	
ASTM E-84		
ASTM E-119	1 & 2 Hour on gypsum and wood wall and floor/ceiling assemblies	
UL 263		
NFPA 251		
ULC-S-101		

# **Mixing & Thinning**

Mixer Use ½" electric or air driven drill with a slotted paddle mixer

(300rpm under load).

Mixing Fireguard® must be mixed using a ½" electric or air driven drill

with a slotted paddle or jiffy mixer blade. Mix material for a minimum of 5 minutes to achieve the necessary texture

required before spraying.

**Thinning** Do not thin.

**Tinting** Do not tint.

# **Application Procedures**

**Brushed or Rolled** Generally creates an 11 to 12 mil wet application.

Multiple coats will be required to meet specifications to the job requirements. Allow each

specifications to the job requirements. Allow each coat to completely dry to touch before applying

next coat.

Airless Spray A single coat, built up with a number of quick

passes, allows greater control over quantities, thickness and finish. In most conditions, it is advantageous to apply two thin coats rather than

one thick coat

#### Application Procedures

Wet Film Thickness

**Application Rates** At an ambient temperature of 70°F (21°C), the

following application rates are applicable:

25 - 30 mils per coat (wet)

24 hour recoat time between coats

1 coat per day

\*Fireguard can be recoated when previous coat

has a shore D hardness of 50 measured at 70°F (21°C)

Frequent thickness measurements with a wet film

gauge are recommended during the application

process to ensure uniform thickness

**Dry Film Thickness** Final thickness can be measured using an

> electronic dry film thickness gauge. Positector 200 or equivalent may be used. Wet mil thickness dries to 54%. (i.e.  $20mil\ wet = 10.6mil\ dry$ )

## **Application Equipment Guidelines**

Listed below are general equipment guidelines for the application of this product when spray applied.

**Airless Spray** Airlessco LP540 or equivalent

**Spray Gun** Standard airless spray gun

0.019"- 0.021" **Spray Tips** 

4"-10" (depending on section being sprayed) Fan Size

**Hose Length** 150' (45m)

**Material Hose** 3/8" (9.25mm) I.D. minimum

Whip Hose 1/4" (6.35 mm) I.D minimum (optional)

## **Cleanup & Safety**

Cleanup Pump, Gun, Tips, Hoses, and Mixers should be cleaned once per

day with clean water.

Safety It is recommended protective equipment should be worn when

> applying Fireguard®, including spray suits, eye protection, gloves, and respirators. Refer to Fireguard® Material Safety Data

Sheet.

Ventilation Ventilation should not be less than 4 complete air exchanges

per hour until the material is dry.

#### **Maintenance**

General If coating becomes damaged, rebuild required thickness by

spray, brush or roll. When dry, smooth and finish with topcoat to match. Damaged areas must be abraded back to a firm edge by sanding or scraping. The topcoat should be abraded back 1" (25.4 mm) from the damaged area. The surface must be clean

and dry before applying Fireguard E-84®.

#### **Testing/ Certifications**

Uncertainty Measurement in Guardian's fire testing is less than 1% as per ASTM E 2536-06.

Guardian is accredited and meets the requirements of ISO/IEC 17025 as verified by ANSI/ASQ National Accreditation Board/ A CLASS. Refer to certificate and scope of accreditation report AT1247. Guardian also is accredited as an inspection agency per ISO 17020 through ANSI/ASQ National Accreditation Board/ ACLASS, Report 1547.

N.B.: ANSI/ASQ/ACLASS is a signatory member of the International Laboratory Accreditation Cooperation's (ILAC) Mutual Recognition

Arrangement (MRA).

ANSI/ASQ/ACLASS accreditation of Guardian ensures global recognition for Guardian's services.

## **Application Conditions**

**Curing Schedule** 

Condition	Material	Surface	Ambient	Humidity
Minimum	70°F (21°C)	50°F (10°C)	50°F (10°C)	0%
Maximum	100°F (38°C)	125°F (52°C)	110°F (43°C)	85%

Fireguard must be protected from exposure to weather. Protect from freezing.

# Storage, Packaging & Handeling

**Shelf Life** 1 year from production date

> \*Shelf Life: (actual stated shelf life) when kept at recommended storage conditions and in unopened original container.

**Shipping Weight** approximately 12 lbs. per gallon (1.44 kg/l)

Storage Store indoors in a dry environment between 33°F-100°F (1°C -

38°C). Protect from freezing.

**Packaging** 

Surface Temp. & 50 % Relative Humidity	Dry to Recoat	
77°F (25°C)	24 Hours	
*It is a consequent of the control o		

\*It is recommended to apply one per day. Drying time will vary with temp. Thinner coats as well as air movement will help drying time. Another coat of Fireguard® can be applied when previous coat has a Shore D hardness of 50 measured at 70°F (21°C). It can be top coated when a hardness of 60 is achieved after 4-5 day cure time.
