

Mr. Suberthodson
Holmes, Edwards, Inc.

October 27, 1953

After consultation with local specialists on "ballier's hardware" I find that all hardware concerns will understand this term which means the usual type of levered latch operated by the usual knot or thumb-piece and which can be locked against the outside by pressing a button at the side of the lock but cannot under any circumstances be locked against the inside. If the owner desires that any of these locations be protected against opening the latch with a knife blade, vestibule locksets at those locations should be specified to be "guaranteed."

9. Since each leaf of the two pair of entrance doors and the single pair of entrance doors from Brown St. is less than 3 feet wide, special consideration must be given to locking and operating hardware. These details should all be understood and agreed upon before the doors are shipped from the factory rather than merely submitted here "before installation", which may mean that the doors are actually on the job and the owner committed to them when our conference takes place. If these doors are Lawrence, the manufacturer has had ample notice of the requirements many months ago.

Briefly both doors of a pair must be equipped with a vestibule lockset or equivalent or one of a pair with that type and the other with anti-panic hardware with "crash bar" full width of door. Many of the modern doors come with such narrow stiles that difficulties arise and the owner is in a poor bargaining position, if he owns the doors when the question is debated. We expect a conference on these doors, but it should take place at once before Day's owns the door or at least before they are shipped to the job.

10. Mr. Holmes' statement of design has been found on Sheet 5, so the above on that subject may be ignored.

11. Sheets 5 & 6 should be revised to show:

- walls of rear doorway to be 10 inches thick at least at the bottom and wall at top of steps to extend at least 4 feet below grade
- handrails on stairs from second to third floors to extend clear to lowest riser
- handrail on both sides of two steps in Brown St. vestibule
- change of underpinning of boiler room wall as indicated in architect's letter of October 9, 1953.

12. If the note "U L B" means fire doors labelled by Underwriters' Laboratories as Class B, your attention is again called to the fact that most, if not all of them, are not required by our Code. No objection to using them, but we would like the owner to understand that he is not compelled to.

Very truly yours,

W.McD/B

Warren McDonald
Inspector of Buildings

P. S. Kawneer man came in this afternoon and they are to use crash bars across each leaf of both pairs of entrance doors, but they know nothing about the Brown St. or the storm doors.

APPLICATION FOR AMENDMENT TO PERMIT

Amendment No. 5

Portland, Maine, Sept. 3, 1953

To the INSPECTOR OF BUILDINGS, PORTLAND, MAINE

The undersigned hereby applies for amendment to Permit No. 53/434... pertaining to the building or structure comprised in the original application in accordance with the Laws of the State of Maine, the Building Code and Zoning Ordinance of the City of Portland, plans and specifications, if any, submitted herewith, and the following specifications:

Location 491 Congress St. Within Fire Limits? yes Dist. No. 1
Owner's name and address Brown Estate, c/o Harold Berry, 192 Ledge St. Telephone _____

INTER-OFFICE CORRESPONDENCE

CITY OF PORTLAND, MAINE
PUBLIC WORKS DEPARTMENT

DATE: October 22, 1953

FROM: Bryan O. Whitney, Commissioner of Public Works

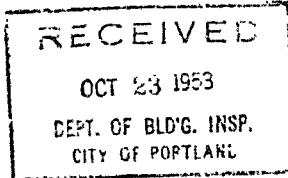

Subject: Old Vaults Beneath Sidewalk at Day's - 491 Congress Street

With relation to the subject matter of your memo of October 20th, to Mr. Shur, it is my opinion that it will be to the best interest of the City that the owners of this building be required to completely fill these area ways with suitable gravel under the public sidewalk.

Even though the existing supports over the area ways may at the present time be in a satisfactory condition, if permission to seal these area ways off be granted, then there will be no way of inspecting these supports in the future, and we would have no indication of deterioration, until probably actual failure of the supports.

Bryce O. Thresher
Commissioner of Public Works

BON/mc

BP 491 Congress St.

October 20, 1953

Barnett I. Shur, Corporation Counsel
Bryan O. Whitney, Commissioner of Public Works
Warren McDonald, Inspector of Buildings

Old vaults beneath the sidewalk at Day's, 491 Congress St.

In connection with the extensive alterations in the building at 491 Congress St., owned by Brown Estate and occupied by Day's, Inc., there are several existing vaults beneath the public sidewalk which have evidently been there for a great many years, and the architect is proposing to seal-off all of them except one which will be used for a vault for the entrance of the Electric Service and will remain accessible from the basement of the store.

Apparently they mean to seal-off these vaults by a thin wall or partition at about the street line, thus leaving the most of the vault without filling and therefore inaccessible.

It is well known that this space under the sidewalk and under all streets is of considerable public interest and generally under the jurisdiction of the Municipal Officers. For the past several years such vaults have not been created without the approval of the Municipal Officers and an agreement with the owner. These vaults, however, were evidently created long before any such procedure was used.

Under these circumstances it seems to me that a definite policy should be established satisfactory to the Municipal Officers, or at least to the Public Works Department, to safeguard the interests of the public.

While the architect says that the supports over the vaults, carrying the public sidewalk, appear to be satisfactory, and, of course, the area of the vaults is small, it is a fair question if it is for the best interests of the City to merely seal-off these spaces with the possibility that something will go wrong in which case, I suppose it would be the obligation of the City to fix the trouble.

Will you be good enough to let me know as soon as possible what is the best course for me to pursue in issuing building permits which involves sealing-off the vaults. At present we are letting them go ahead with certain parts of the work upon the condition that this feature be cared for in a manner satisfactory to the City. Nevertheless, it would be helpful to know the answer as quickly as possible.

W.McD/b

October 9, 1953

Department of Building Inspection
City of Portland, Maine

Attention: Mr. Warren H. McDonald
Inspector of Buildings

Re: Job #634 - Alterations at
489 Congress Street - for
Day's Jewelry Stores Inc.

Dear Mr. McDonald:

We are sending under separate cover, two sets of
the following drawings, revised to October 9, 1953, covering most
of the requirements set forth in your letters of October 1 and
October 2, 1953:

- rec'd (2) Occupancy plans #01, 02, 03
10/13/53 (2) Electrical plans #E1, E2, E3
(2) Computation sheets for Vestibule construction
only (2) Detail of Marquee facing ~~endearing sheet~~ sheet 11
over (2 each) Drawings #8, 9, 10 showing revisions to show window
details.

We sincerely hope that we have covered all of your
requirements, and it is our intention that the building shall be
constructed in accordance with your Building Code, a copy of which
has been unavailable to us.

Referring to your letter of October 2, 1953;
10/13/53 (1) It is our understanding that the original design for the
Marquee contemplated steel pans for the decking, with some
incombustible fill and T & G roofing. The soffit to be
metal furred, wire lathed and cement plastered. No wood
furnishings for facings. See our Drawing #11.

(2) Store Front- We have provided a concrete slab foundation
for all wood frame bulkheads, and have indicated the method
of holding the granite veneer onto the masonry or wood
backing. Further details of anchoring to be provided in
shop drawings and submitted to you for your approval.

OK per
blts 10/13
The valance over show window has been further detailed to pro-
vide a metal structure entirely self-supporting. Wood is
used merely as a backing for the metal window sash and
carries absolutely no load.

actually re-
act are 2nd. The structural columns at Brown street and Brown Street and
Congress Streets are to be fireproofed with concrete to Code
standards - applies to next flr

requirements, with 3/16" bronze wires cast-in-place for granite facings, as well as space for cementing stone to concrete.

The entrance doorway has been detailed in structural steel, resting on a new beam under vestibule, and anchored at the top to second floor timbers and braced to spandrel girder above show windows. Here again, wood is used merely to attach our trim to, and is firestopped with rock wool packed solid.

(3) The existing vaults under the sidewalk are of no value to the Owner, and it is our opinion that if they were sealed off from the Basements that potential trash catchers will be avoided. Structurally they are apparently o.k. We respectfully ask that they may be abandoned.

(4) The existing vault behind the transformer vault we propose to use for the new entrance switch, with a control at the first vestibule; and a wire grille at the entrance to the vault.

(5) We have redesigned the entrance vestibule to use a reinforced concrete slab, with additional steel to frame entrance doorway onto.

(6) The removable vestibule doors will have hardware to match permanent entrance doors.

(7) Egress hardware details - Kawneer doors will be submitted to you before installation of doors.

(8) We have submitted occupancy plans, showing paths to egress and also one set of Electrical plans showing all lighting, plus emergency lighting (power failure actuated). Signs will be provided as required by your department.

(9) The "Recreation Room" on the second floor has been abandoned and that space will be occupied by offices or optical repair shop.

Toilets have been separated and placed on second and third floors.

The large room on the third floor, #301 and 302, will be used for accounting offices only. No assembly hall has been contemplated.

HOLMES AND EDWARDS
A R C H I T E C T S
126 STATE STREET - BOSTON

-4-

October 9, 1953

We have approved the preliminary sprinkler plans by the Grennell Company, and after corrections, these plans will be filed with your department by the Sub-contractor.

All spaces exceeding 14" clear above the ceilings, have been provided with additional heads as required in your Code.

all stairs
new stairs
old stairs
outward
Hand railings will be provided on both sides of all stairways and existing egress at rear of ell will be changed to swing outward.

Underpinning of existing wall in new Boiler Room will be extended full length of footing. Doors to Boiler and Incinerator Rooms will be changed to U.L. Class "C" doors, steel jambs, automatic closing.

The various sub-contractors for mechanical equipment will file for permits on their work.

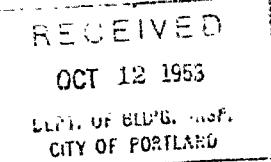

It has been difficult for us to step into this alteration project where so many parts of the work had been started or completed, but we believe we have it organized now so that the work will proceed more smoothly.

We wish to express our appreciation for your extra effort in examining our drawings and issuing the preliminary permits before you left on your trip.

Very truly yours,

HOLMES AND EDWARDS

Memorandum from Department of Building Inspection, Portland, Maine
491 Congress St.—Installation of oil burning equipment for Day's Inc.
by Matthews Sales & Service, installers

Before tank and piping is covered from view, installer is required to notify Fire Department Headquarters of readiness for inspection and to refrain from covering up until approved by the Fire Department.

This tank of 5000 gallons capacity is required to be of steel or wrought iron no less than $\frac{1}{2}$ " thick and before installation is required to be protected against corrosion, even though galvanized, by two preliminary coats of red lead and heavy coat of hot asphalt, or equivalent.

Pipe lines connected to underground tanks, other than tubing and except fill lines and test wells, must be provided with double swing joints arranged to permit the tank to settle without impairing the efficiency of the pipe connections.

Owner and installer will have to bear the responsibility for the structural capacity of the tank to support loads from above such as heavy motor trucks.

If tank will be so located as to be subjected to the action of tide water or "ground" water, adequate anchorage or weighting must be provided to prevent "floating" when tank is empty or nearly so.

c/o Mr. Harold Lee Berry
192 Middle St.

Mr. Carroll S. Hannaford
4 Wiggy Wharf
Dear Mr. Hannaford:

Permit for installation of ducts for air conditioning system in the building at 491 Congress St. is issued, herewith, subject to the following conditions.

You are probably aware that the Municipal Officers of Portland as a Board of Standards has established National Fire Protection Association Pamphlet No. 90, Standards for Air Conditioning Systems as the regulation to be complied with in design and installation of such systems.

The permit is issued subject to compliance with these standards, the plans not being in sufficient detail to admit of a complete check.

If mechanical refrigeration equipment is to be installed in connection with this system, that should be covered by a separate permit applied for by and issuable only to the actual installer so that the required approval of the Fire Chief may be secured.

If you do not have a copy of Pamphlet No. 90 one may be examined at this office or you can procure a copy for thirty-fives (35) cents from the National Fire Protection Association, 60 Battery March St., Boston 10, Mass.

It is assumed that the air conditioning system is not to be directly connected to any fire-actuated appliance. If that should turn out to be the case, your attention is called particularly to the requirements for clearances from burnable materials as covered by Section 120 of Pamphlet No. 90.

Very truly yours,

Warren McDonald

Re: Day's Inc. - 489 Congress St.
Portland, Maine - Job #634

Dear Mr. McDonald:

In answer to your letter of October 23, 1953,
you may be assured that the installation of the air conditioning
equipment at the above job will meet all of the requirements
of Pamphlet No. 90, issued by the National Fire Protection
Association.

Our plans and specifications for this equipment
will be completed today and will be sent to "our office for
approval before proceeding with the installation. The air
conditioning unit will be a split system, i.e. steam coils and
cooling coils with the proper dampers, controls etc.

Very truly yours,

HOLMES AND EDWARDS

491-497 Congress St. - Building Permit to install Automatic Sprinkler System
for Day's Inc. by E. N. Sweetser - 10/7/53

Permit for installation of an automatic sprinkler system throughout a portion of the basement and three stories of the building at 491-497 Congress St. is issued herewith based on the plans filed with the application for permit. As soon as plans have been completed for the system in the rest of the building, they should be filed together with an application for an amendment to this permit for checking and approval.

Attention: Mr. Warren McDonald
Inspector of Buildings

Dear Mr. McDonald:

Re: 491-497 Congress Street
Portland, Maine
I.F.U. Sprinkler System
Day's, Inc.
I.R.D. 13652

My attention has been called to a question raised by you, of sprinkler coverage in the southeast corner of the basement of the above captioned property.

Without a doubt an obstruction to proper sprinkler distribution has been created by construction of an interior cinder block wall. I have suggested this situation could be corrected by removal of one course of blocks from the top of this wall which now extends only part way to the basement ceiling. The alternative would be to provide an additional line of sprinklers the length of the wall. One or the other of these measures will be taken before the sprinkler installation is accepted.

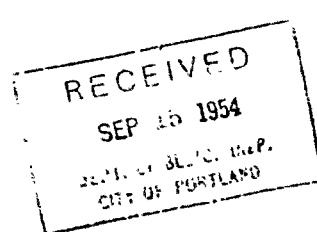

I have further noted the arrangement of sprinklers near the air conditioning duct work in this area. I do not believe this duct work will interfere with proper sprinkler distribution there and have recommended no change in the present arrangement.

Very truly yours,

W. E. Hook
Divisional Manager

*(Please add to
Sprinkler draft letter)
April 29, 1954*

April 29, 1954

Mr. Sidney A. Davidson
Treas. Day's Jewelry, Inc.
489 Congress Street
Portland, Maine

Dear Mr. Davidson:

I received a copy of Mr. Warren McDonald's letter of April 26th, along with you and Mr. Hodsdon. I am glad that the New England Fire Insurance Rating Association has found it unnecessary for you to install sprinklers in your show cases, and am writing this to tell you that this Company agrees to the alternative, namely; draft stops at regular intervals and at the junction of the cases paralleling Brown and Congress Streets. In other words, install these draft stops so they will meet the requirements of the building Inspector and not increase your insurance rate.

I am sending a copy of this letter to Mr. Warren McDonald, Inspector of Buildings, City of Portland, Maine.

Very truly yours,

JOHN MARSHALL BROWN COMPANY

Harold L. Keeley

Mr. Houston for Mr. Piper

Mr. Robert J. Houston
c/o Day's Inc.
491 Congress St.

Dear Mr. Houston:

When the permit for installation of sprinkler system at Day's Inc. at 491-497 Congress St., was issued, it was not foreseen that extensive show cases would be built around the walls of the first story and that Mr. Davidson would desire to provide a barrier or partition of partitioned from the front of the top of these cases to the ceiling, thus making a concealed space which, under the building code, would ordinarily require sprinkler head coverage.

Since the work has progressed so far and to provide a sprinkler heads in these concealed spaces will mean extensive tearing out and adjustment of the sprinkler supply pipes, we took the question up with the New England Fire Insurance Rating Association. That organization replied that omission of sprinkler heads in these concealed spaces is not considered important as affecting the fire insurance rate, but that in such cases draft stops of cement asbestos board or gypsum board should be provided at 10-foot intervals.

Mr. Hout of NEFIRA says that he has approval this arrangement upon agreement of yourself and the lessee to provide draft stops at regular intervals (presumably 10 feet) and at the junction of the cases paralleling Brown and Congress Sts. (and presumably at any similar corners).

It is important that you see to it that these draft stops of incombustible material be provided as agreed upon, and that Mr. Piper make sure to notify our inspector when any particular section of these concealed spaces have the fire stops in place and are ready for covering up by erecting the partitions at the face of the cases;—not to cover up any of these concealed spaces until our inspector has seen the draft stops in place.

Very truly yours,

Warren McDonald
Inspector of Buildings

Sprinkler System

April 16, 1954

Mr. George A. Hunt
New England Fire Insurance Rating Assoc.
477 Congress St. Room 324

Copy to: Mr. Mitchell E. Hodufaly
Mr. Grinnell Co., Inc.
482½ Congress St.

Dear Mr. Hunt:

I feel quite uncertain about some of the details of the sprinkler system being installed for Bay's Inc. at 491 Congress St. due to the fact that, since you approved the plans of the sprinkler system which are filed here with Grinnell's application for a permit, Bay's have come up with a plan of display cases around the first story store which has come bearing upon the sprinkler head coverage and because the tops of the cases will be a few feet below the sprinklered ceiling, and they desire to close off the space over these cases with plywood, presumably supported on some type of studs.

We have had similar questions come up in other stores, and I have talked with Mr. Hodufaly of Grinnell about this case whereupon he referred me to Section 713 of NEFU Standards (Pamphlet No. 13) of June 1953, and told me that he had been over the situation with you and that you agreed from a rating standpoint, there is no necessity for providing heads in these concealed spaces.

I talked particularly about Section 713(b), on the basis of his feeling that these concealed spaces are very limited in area.

I feel that those of you who are dealing with fire risks all the time are better qualified than I to decide what is a "very limited area". However, I am confronted with the building code requirement that, where a building or part thereof is required to be sprinklered, the system shall cover and protect all spaces, concealed or otherwise, where the installation and maintenance is practicable, with some exceptions where sprinkler heads would appear to be more of a hazard than a protection. Our Board of Standards have extended the application of the text of the code by reference to the Underwriters' pamphlet in cases where the code is not explicit.

In attempt to reach the right decision, I looked over the situation on the job. While most of the cases have not been built, even in the part under construction, I found near the corner of Congress St. and Brown St. a case in the rear of the show windows, about 4 feet wide and about 15 feet long running parallel to Brown St. and joining with a part of the case parallel to Congress St., which is about 20 inches wide and about 30 feet long. Since there was nothing on the architectural plans which you must have had or on the sprinkler plans to indicate this concealed space, it turns out that there is only one head exposed to this future concealed space (near the corner of the building) and the other heads (two or three at least) come at the edge of the future concealed space/exposed only in the open store. Presumably some access panel would have to be provided for this one head in the concealed space, but otherwise it would be unprotected.

Mr. Hodufaly called attention to the fact that there are heads over the ceiling of this future concealed space, and seemed to feel that a smouldering fire which might originate in such a concealed space, could eventually burn through the plywood walls or through the ceiling and operate the existing heads in one place or another. It seemed to me, however, that there would be a long delay in such a case after the fire

Mr. George A. Hunt

2

April 16, 1954

started which might set the stage for a hot air explosion, which would spread the fire all over the place.

I shall value your opinion with regard to this matter as an assist in making a decision under the Building Code, and also whether or not you feel that our Code may be unnecessarily severe; also whether you feel that this particular area of more than 100 square feet is such a very limited area as contemplated in the pamphlet.

We are all plagued with the practice of owners and builders of not working out their show cases and interior fittings at the time the sprinkler systems are designed. If they persist in this practice, it seems to me there should be no great objection if the sprinkler system has to be adjusted or extended after they have made up their minds about the fittings.

Very truly yours,

Warren McDonald
Inspector of Buildings

Gentlemen:-

The reasons for excluding certain features of the work at the Lay job at 491 Congress St. from Acceptance are as follows:

1. Sect. 212d of the Building Code provides that the marquee shall be of non-combustible material only.

2. There are several aspects of the store fronts which are unusual to us, and it is doubtful if any of the details are acceptable under the Code.

—It is understood that the construction beneath the show windows is of wooden studs with spaces between filled with rockwool with asbestos board on the inside and metal lath and plaster on the outside against which it is planted one inch thick granite veneer. This frame construction beneath the show windows is allowable in the Fire District but we have not discovered the method of fastening the granite veneer in these locations. Please explain by written specifications, not verbally. Our Board of Standards has set up some rules on Page 203 of the Code for thin granite veneer which certainly contemplates that the veneer shall be anchored to a masonry backing. There are rigid changes in the use and application of these materials and we have found some rules in our Code for fastening such granite veneer to frame construction plastered upon if the back of the veneer is rough and special cement is used. Perhaps something like that can be worked out, but it may have to be approved by our Board of Standards. Certainly indications are from everything relating to veneer in our Code that the veneer ought not to be supported upon the wooden floor, and it hardly seems that this feature can be accepted.

—It appears that the construction over the show windows consists mostly of formed metal brackets like channels filled with gypsum block with the rough window frames of wood coming up under the under flange. It is not clear how the plaster which starts over the windows and runs out in a curve under the marquee is to be supported. Certainly this cannot be of wooden frame construction.

—We have not discovered of what construction you intend to make the columns at the corners and at either side of the main entrance nor the fairly large area over the main entrance on the Congress St. face outlined by steel channels. Certainly these places cannot be built of wooden frame construction.

It is doubtful if the City can go along with "scaling off" the vaults under the sidewalks. Mr. Hodson says that the sidewalks are supported over these vaults by brick

arches. This is a matter which will have to be taken up with the Commissioner of Public Works and the Corporation Counsel to see how best the public interest may be served.

4. What is the arrangement for the entrance vault for the electric service? Does that already exist or is it to be provided? If the latter, probably special approval must be secured from the Municipal Officers.

5. We shall have to look into the use of wooden floor joists to support the cinder concrete and Ferro-concrete floor outside of the main entrance. Is there a good reason for abandoning the original design of a reinforced concrete slab supported by steel?

6. The doors in the removable vestibule will have to be equipped with the same type of hardware as provided on the permanent doors at the entrance.

7. We need to know the details of hardware proposed for the main doors at the front entrance and the glass doors at the Brown St. entrance. Many years ago people from Kinnear came here and we went into these matters thoroughly. Since each door is less than three feet wide, each door must be equipped with the equivalent of a vestibule latcheset, a term used by us but explained in Sect. 212c2.5 of the Code. We have had difficulties with those modern doors to some extent due to the fact that they do not have material enough between the glass and the edge of the door to accommodate the fittings for a crash bar to extend clear across the door. I have the promise of the Kinnear men that they would work everything out satisfactorily and that we would get the plan, but nothing has been heard of them since.

8. Sometime soon the architect should work out means of egress for second and third floors designating the routes which he proposes to keep them well separated and so available that one hazard will not likely put all of the means of egress out of commission. He should know the types of lockssets to be used on the doors wherever more than 20 persons will be accommodated and should show locations of exit signs, directional or otherwise as may be necessary so that all persons on the second and third floors will know unerringly what direction to take to reach a place of safety outside of the building.

9. A recreation room is noted on the second floor. This room is large enough to accommodate 50 people or so for common recreation and a much larger number if they were to be seated.

There is a very large room on the Brown St. end of the third floor which could possibly be used for some type of assembly, employee meetings or shows. The architect and owner should bear in mind that every room where more than 20 persons are to be accommodated at one time should be designed as a Minor Assembly Hall and they should examine Sect. 206 of the Code applying to such uses and show fully on the plan what all of the rooms are to be used for, offices, shops, display, assembly or what have you.

Very truly yours,

Warren McDonald
Inspector of Buildings
