

SCOPE OF WORK

269 COMMERCIAL STREET, PORTLAND, MAINE UNIT 2C

Replace three existing windows with three new units provided by Hammond Lumber.

Construct new RO within existing masonry opening and install new window unit as per engineer/engineered drawings.

Note: this work is non-structural, is limited to window replacement, and will follow all historic guidelines.

Over the last several years, I have installed 13 identical window units at various locations throughout this building using the same criteria as outlined above.
