

A typical floor level has a total area of 3,620 S.F. of which 781 S.F. is window area. Therefore, total window area per floor = 21.6% of the total wall area per floor.

Windows at these locations do not presently exist. It is proposed to add new windows at these locations. The total area of the 9 windows totals 144 S.F.

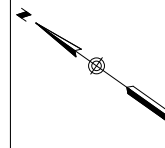

Window openings highlighted with gray tone will remain blocked up with masonry. The total area of these openings = 341 S.F.

The total wall surface has a total area of 19,641 S.F. of which 3,502 S.F. is window area. Therefore, total window area = 17.8% of the total wall area.
