Re: 225 York Street  
Portland, Maine

Project Number: 16-184

Dear Jon:

Casco Bay Engineering performed design calculations for a new window header at the existing building referenced above. The proposed header must be double 2x12 P.T. spanning approximately three feet, four inches.

The header should be supported on each end by the existing brick wall with a minimum of 4 inches of bearing, each side. The contractor shall verify this in field and notify Casco Bay Engineering of any discrepancies.

The members mentioned above were designed in accordance with the IBC 2009 prescribed loads.

Please let us know if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Eric Dube", is written over a horizontal line.

Eric Dube, P.E.  
Casco Bay Engineering
