

GENERAL NOTES:

1. The notes on the drawings are not intended to replace specifications. See specifications for requirements in addition to general notes.
2. Structural drawings shall be used in conjunction with job specifications and architectural, mechanical, electrical, plumbing, and site drawings. Consult these drawings for locations and dimensions of openings, chases, inserts, reglets, sleeves, depressions, and other details not shown on structural drawings.
3. All dimensions and conditions must be verified in the field. Any discrepancies shall be brought to the attention of the engineer before proceeding with the affected part of the work. Do not scale plans.
4. The structure is designed to be self supporting and stable after the Building is complete. It is the contractor's sole responsibility to determine erection procedures and sequencing to ensure the **safety** of the building and its components during erection. This includes the addition of necessary shoring, sheeting temporary bracing, guys or tiedowns. Such material shall remain the property of the contractor after completion of the project.
5. Sections and details shown on any structural drawings shall be considered typical for similar conditions.
6. All applicable federal, state, and municipal regulations shall be followed, including the federal department of labor occupational safety and health act.

DESIGN LOADS:

1. Building code: BOCA Basic Building Code (1999)
2. Design Loads shall be in accordance with the building code.
  - Roof (snow) Live Load..... 42 PSF (plus drift as applicable)
  - Residential floor Load ..... 40 PSF
  - Retail Floor Load ..... 100 PSF (First Floor Only)
3. Lateral loads (wind and seismic) shall be in accordance with the code.

TIMBER FRAMING:

1. All timber framing shall be in accordance with the AITC Timber Construction Manual or the National Design Specification (NDS) -Latest editions.
2. Individual timber framing members shall be **visually** graded, minimum grade #2 Spruce-Pine-Fir (SPF), kiln dried 19% maximum moisture content (unless otherwise noted on the drawings).
3. All lumber in contact with concrete and as indicated shall be **pressure** treated. Timber shall be southern yellow pine treated with CCA to 0.4 #/CF in accordance with AWPA C-18.
4. Provide solid 2x timber bridging, double nailed at each end, at 8 feet maximum spacing for all dimensional **lumber** floor framing.
5. Standard metal connectors shall be used at all timber to timber connections or as noted on the design drawings.
6. Nailing not specified shall conform with BOCA appendix C.
7. "LVL" indicates Parallam laminated veneer lumber manufactured by Boise Cascades Company or approved equal.
8. Provide 19/32" thick APA rated sheathing on roof framing.
9. Provide 15/32" thick APA rated sheathing on exterior wall framing.
10. Provide 23/32" thick APA rated sheathing on floor framing.

**FOUNDATION NOTES:**

1. Foundations have been designed utilizing a presumptive bearing capacity of 2000 PSF to be verified in the field.
2. Interior spread footings and exterior strip footings shall be founded on undisturbed native soil or compacted structural fill.
3. Structural fill shall be used at all locations below footings and **slabs** and adjacent to the foundation walls. Prior to placement of structural fill, remove all topsoil and other unsuitable material. Compacted structural fill shall consist of clean granular material free of organics, loam, trash, **snow**, ice, frozen soil or **any** other objectionable material. It shall be well graded within the following units:

SCREEN OR SIEVE SIZE	PERCENT FINER BY WEIGHT
6 INCH	100
3 INCH	70-100
NO. 4	35-70
NO. 40	5-35
NO. 200	0-5

**CONCRETE NOTES:**

1. All concrete work shall conform to ACI 318-89.
2. Concrete strength at 28 days shall be 3000 PSI.
3. **AH** concrete **shall** be air entrained **4% to 6%**.
4. Concrete shall not be placed in water or on frozen ground.
5. Provide PVC sleeves where **pipes** pass through concrete walls or slabs.
6. Reinforcing bars shall conform to **ASTM A615** Grade 60 deformed bars, **and** shall be detailed, fabricated and erected in accordance with ACI 315-Latest edition.
7. Welded wire fabric **shall be** provided in flat **sheets**.
8. Fiber reinforced concrete shall conform to **ATSM C-1116**.
9. Splices of reinforcing bars shall be in accordance with ACI 318-89. Splices of **WWF shall be** 6" minimum.
10. Concrete finishes: See specifications and Architectural drawings for additional information.
11. Anchor bolts shall conform to **ASTM A307** unless noted otherwise on plan.
12. The general contractor shall be responsible for coordination of door bondout locations and slab depression & bondout locations with Architectural, Mechanical & Plumbing drawings, and kitchen equipment vendors as necessary to properly install each specific item.
