BUILDING PERMIT INSPECTION PROCEDURES

Please call 874-8703 or 874-8693 (ONLY)

to schedule your inspections as agreed upon

Permits expire in 6 months, if the project is not started or ceases for 6 months.

The Owner or their designee is required to notify the inspections office for the following inspections and provide adequate notice. Notice must be called in 48-72 hours in advance in order to schedule an inspection:

By initializing at each inspection time, you are agreeing that you understand the inspection procedure and additional fees from a "Stop Work Order" and "Stop Work Order Release" will be incurred if the procedure is not followed as stated below.

A Pre-construction Meeting will take place upon receipt of your building permit.

 X **Final inspection required at completion of work.**

Certificate of Occupancy is not required for certain projects. Your inspector can advise you if your project requires a Certificate of Occupancy. All projects DO require a final inspection.

If any of the inspections do not occur, the project cannot go on to the next phase, REGARDLESS OF THE NOTICE OR CIRCUMSTANCES.

CERIFICATE OF OCCUPANICES MUST BE ISSUED AND PAID FOR, BEFORE THE SPACE MAY BE OCCUPIED.

High Efficiency Space Heating and Domestic Hot Water ALL-IN-ONE.

High Efficiency Condensing Stainless Steel Wall Mounted Gas Boiler with Built in "Tank-in-Tank" Indirect Fired Water Heater.

The Prestige Excellence Model Condensing Boiler also incorporates a 14 gallon Indirect Fired Water Heater in the cabinet that is capable of producing 180 gph of domestic hot water.

Features

- » 95% AFUE Efficiency
- » Fully Modulating
- » Advanced Indirect Water Heating System
- » 14 Gallon Indirect Fired Water Heater
- » Built-in 6 Speed System Circulator
- » Electronic Pressure Relief Valve
- » Quiet Operation
- » 120V Gas Valve
- » 1/2" NPT Connections

439 GRADE STAINLESS STEEL HEAT EXCHANGER
Vertical Firetube Design. Impervious to chloride cracking. Unparalleled resistance to corrosion.

HIGHEST WATER CONTENT IN THE INDUSTRY

- Ideal for small zones without short cycling
- Stable temperature control
- Low pressure drop
- Less sensitive to water flow

SELF CLEANING /SELF DESCALING

Condensate washes combustion residue away when streaming down the tubes resulting in a constant efficiency and reduced maintenance.

Fig. 1: Direct Vent - Vertical Termination of Vent and Combustion Air Piping.

Fig. 2: Direct Vent - Vertical Termination of Vent and Combustion Air Piping.

- f. Locate the vent termination to prevent possible condensate damage to exterior finishes.
 - g. Avoid locations of possible accidental contact of flue vapors with people or pets.
6. The vent termination must also maintain the following clearances; as shown in Fig.3.
- a. At least 3 feet from adjacent walls
 - b. At least 3 feet below roof over hangs
 - c. At least 7 feet above any public walkways
 - d. At least 3 feet above any forced air intake within 10 feet (does not apply to the combustion air inlet of a direct vent appliance).
 - e. No closer than 12" below or horizontally from any door or window or gravity air inlet.
 - f. Must be at least 4 feet from any electric meters, gas meters-regulators, relief valves or other equipment. Never terminate the vent above or below any of these items within 4 feet horizontally.

- 7. Locate the vent and combustion air terminations in a manner to protect from damage by foreign objects, such as stones, balls, or buildup of leaves or sediment.
- 8. Do not connect any other appliance to the vent pipe or multiple boilers to a common vent pipe.

Direct Vent - Vent Installation - Through the Roof

1. Vent and Combustion Air Penetration

- Vent pipe penetration through combustible or non-combustible wall material should maintain a minimum 1/4" clearance. The diameter of the penetration hole should be 4" minimum for 3" pipe or 5" minimum for 4" pipe.
- Combustion air pipe penetration can maintain zero clearance. The diameter of the penetration hole should be 3 1/2" minimum for 3" pipe or 4-1/2" minimum for 4" pipe.

- 2. The installer must use a galvanized metal thimble for the vent pipe penetration.
- 3. Locate the vent and combustion air pipe penetrations to provide clearances as described in Fig. 1 & Fig. 2 on page 6.
- 4. The installer must comply with all local codes for isolating the vent and combustion air pipes as they pass through floors, ceilings and roofs.
- 5. The installer should provide adequate flashing and sealing boots sized for the vent pipe and combustion air pipe.

Termination Fittings - Through the Roof

- 1. The vent and combustion air terminations must include a factory supplied "bird screen" installed as shown in Figs. 4, 5 & 6 on page 8.
- 2. The combustion air piping must terminate in an upside down "U" shape fashion using two 90° elbows as shown in Fig. 1 page 6 or with a tee as shown in Fig. 2 on page 6.
- 3. The vent piping must terminate vertically with a coupling as shown in Figs. 1 & 2 page 6.

WARNING

Do not extend the vent pipe above the roof beyond the dimensions shown in Fig. 1 & Fig. 2 on page 6. Extended exposure of the vent pipe could cause condensate to freeze and block the vent pipe.
