Re: 211 State Street

Maine State Security Services has installed a new addressable fire alarm system at 211 State Street Portland, Maine.

This is a 3 story non sprinkled 4 unit apartment building that doesn't require a fire alarm system under NPFA 101, but as an alternative to replacing corridor doors with ones that are fire rated owner has come up with an agreement with the city to provide a fire alarm system in the common area's and have that system monitored. Smoke detection was installed in the common hallways, with pulls at the exits, Smoke detectors were installed in the basement with a CO detector installed in the furnace room, Horn Strobes were also installed in the common area's, The system is tied into a UL listed Central Station using a Cellular radio as the path of transmission. Installation was done in accordance with NFPA 72, NEC 2011, Life Safety Code, per approved plans by the Portland Fire Department and in accordance with the City of Portland Signaling System's Ordinance. All documents pertaining to the fire alarm system are in the document box.

Each one of the devices was tested from device to control panel and from the control panel to the Central Station and all devices have passed the testing. Testing was done 4-10-18

If you should have any questions please feel free to give us a call.

Sincerely,

Christopher L'Heureux
