Portland, Me. 04102

With relation to permit applied for to demolish 3 story wooden
building 454 Cumberland Ave. belonging to
Harold E. Andrews Fort Amer. Legion, it is unlawful to commence
demolition work until a permit has been issued from this
department.

Section 6 of the Ordinance for rodent and vermin control
provides, "It shall be unlawful to demolish a building or structure
unless a provision is made for rodent and vermin eradication.
No permit for a demolition of a building or structure shall be
issued by the Building and Inspection Services Department until
and unless provisions for rodent and vermin eradication have
been carried out under supervision of a pest control operator
registered with the Health Department."

The building permit for demolition cannot be issued until
the provisions of this section have been satisfied. It is the
obligation of owner or demolition contractor or both to take up
with the Health Department the matter of complying with this
section, being prepared to inform that department what registered
pest control operator is to be employed.

Very truly yours,

R. Lovell Brown
Director

APPLICATION FOR PERMIT FOR HEATING, COOKING OR POWER EQUIPMENT

Portland, Maine, Sept. 16, 1952

To the INSPECTOR OF BUILDINGS, PORTLAND, MAINE

The undersigned hereby applies for a permit to install the following heating, cooking or power equipment in accordance with the Laws of Maine, the Building Code of the City of Portland, and the following specifications:

Location 454 Cumberland Avenue Use of Building 2-family dwelling No. Stories 2 Building Existing "
Name and address of owner of appliance Beatrice Bl Orr, 454 Cumberland Avenue
Installer's name and address Harris Oil Co., 202 Commercial Street Telephone

General Description of Work

To install gravity hot water boiler and oil burning equipment (replacement)

IF HEATER, OR POWER BOILER

Location of appliance basement Any burnable material in floor surface or beneath? no
If so, how protected? Kind of fuel? oil
Minimum distance to burnable material from top of appliance or casing top of furnace 2'
From top of smoke pipe 2' From front of appliance over 48 From sides or back of appliance over 3'
Size of chimney flue 8x12 Other connections to same flue none
If gas fired, how vented? Rated maximum demand per hour
Will sufficient fresh air be supplied to the appliance to insure proper and safe combustion? yes

IF OIL BURNER

Name and type of burner Easternoil Labelled by underwriter's laboratories? yes
Will operator be always in attendance? Does oil supply line feed from top or bottom of tank? bottom
Type of floor beneath burner concrete
Location of oil storage basement Number and capacity of tanks 1-275 gal.
If two 275-gallon tanks, will three-way valve be provided?
Will all tanks be more than five feet from any flame? yes How many tanks fire proofed?
Total capacity of any existing storage tanks for furnace burners 1-275 gal.

IF COOKING APPLIANCE

Location of appliance Any burnable material in floor surface or beneath?
If so, how protected? Kind of fuel?
Minimum distance to wood or combustible material from top of appliance
From front of appliance From sides and back From top of smokepipe
Size of chimney flue Other connections to same flue
Is hood to be provided? If so, how vented? Forced or gravity?
If gas fired, how vented? Rated maximum demand per hour

MISCELLANEOUS EQUIPMENT OR SPECIAL INFORMATION

Amount of fee enclosed? 2.00 (\$2.00 for one heater, etc., 50 cents additional for each additional heater, etc., in same building at same time.)

LAST USE OF BUILDING _____ CLASS CONSTRUCTION _____

REMARKS It appears that Mr. Thompson has been living in this building for about four years but only recently has he started in with this small activity. He has some power machinery in the cellar for working on the plastic.

INQUIRY How do zoning regulations apply to putting up a small sign on the outside of this apartment house to advertise a small business of making and selling plastic novelties and ornaments?

ANSWER It appears likely that this is such a business as to be in non-conformity with the Zoning Ordinance in the Apartment House Zone where the property is located. Therefore it was suggested that he do not put up such a sign as even a small sign would not be allowable unless it advertised a use which is allowable on the premises. Under the circumstances I would be inclined to let the matter lay, pending other developments. Certainly any expansion of this use would not only bring up immediately the question of compliance with the Zoning Ordinance but the question of compliance with the Building Code as to fire resistive separations between the part used for the plastics and the balance of the apartment house.

AJS
VES

March 14, 1945

Portland Gas Light Co., 5 Temple St.
Thomas Skinner Company, Main St., So. Portland
Mr. Walter G. Leach, 676 Forest Avenue

Gentlemen:

Permit for gas fired steam boiler, hot water heater and gas fired fryer is issued to Portland Gas Light Company, subject to the following:

There is the matter of ventilation of the baking room to be taken care of with assurance that there will not be extra fire hazard due to possibility of the large exhaust fan being running if a quick fire should take place on the doughnut fryer. This is irrespective of the effect of either of the two fans upon the efficiency of the gas fired appliances.

I am told that the Skinner Company is to install the hood and ventilation over the fryer. Since there is a fan involved in this ventilation system over the fryer, a separate permit for this installation of hood and vent pipe is required which is assignable only to the actual installer of the vent and pipe,--the Skinner Company--whether that company is to furnish and install the fan or not. The vent pipe on the hood where it passes through the exterior wall of the building and all of it outside of the building is required to be of standard iron or steel pipe such as normally used for water, or equivalent incombustible material of such nature and thickness as to insure reasonably long life. Naturally that part of the outlet pipe will be heavier than galvanized metal and therefore extra care should be taken in its support. The discharge end of it will have to be in such a location horizontally and vertically as to satisfy the Health Officer.

There is no indication as to where the combustion chamber of the fryer is to be vented. Presumably a pipe is to be run up under the hood close to where the outlet pipe from the hood taken off. Inasmuch as this fryer has an input of more than 50,000 BTU, the vent pipe of the combustion chamber would ordinarily be connected to a masonry chimney. However, we shall not raise the question on that point if care is taken in venting this combustion chamber up under the hood and then extra care taken where the outlet pipe from the hood goes through the exterior wall to see that a collar no less than 1 1/2 inches in diameter is provided from the face of the wall through to the brickwork, and the outlet pipe centered upon it permanently.

Apparently the steam boiler and the hot water heater are to be connected to the same chimney flue, as at present, and if that is true, both appliances require a device calculated to shut off all gas supply from the appliance in event the pilot light or low flame should become extinguished from any cause.

Very truly yours,

Inspector of Buildings

WCD/S

P.S. Uncertainty exists as to how the vent from combustion chamber of dryer is to be run and connected. Mr. March thought it would be run to hood vent between hood and discharge end. If that is done the the above about extra heavy pipe outside of bake room applies. If the vent pipe is merely run up under hood with break between it and hood outlet duct, the extra heavy pipe will not be required but I recommend that it is used for long life anyway.
