

Dear Lanney

Attached is all the documents required for a permit to fix my home after a water break. There was extensive water damage and servpro who did the demolition said I did not need a permit.

The contractor I hired to replace the interior walls that was taken down also said a permit is not required since I was not taking down load bearing wall. I found out after the fact that I indeed do.

Also will be submitting permits for electrical and plumbing that needs to be done.

Yours

Peggy Helen Johnson.

PS: Apologize for all the confusion with the paperwork. Hope this is everything. If it at all possible to expedite this I will be grateful. We have lost a lot of time in trying to finish the house. I can be reached at 207 332 9356.
