

16. Stormwater Management Plan and Stormwater Calculations

Stormwater Management Plan

This project will have minimal impact on stormwater management. One catch basin will be removed adjacent to the existing Maintenance Building; however, this catch basin does not connect to the overall system of catch basins on the site and serves as a drain for the existing Maintenance Building. The outlet from this catch basin that drains into the Fore River will be capped. The wharf will have scuppers installed along the deck similarl to the previous 2011 wharf infill project.
