Building Demolition Notification Form (BDNF)

Important Notice: A permit is required the filing of this BDNF Demolition Notification Form prior to demolition of any building except a single-family home

1) Building owners are required to provide this notification of the demolition of a building to the DEP at least 5 working days prior to the demolition. This notification is **not** required before the demolition of a single-family residence or related structure (e.g., garage, shed, barn). It is **also not** required if previous notification of the demolition has been provided to the DEP as part of an asbestos abatement project notification. **Demolition** means the tearing down or intentional burning of a building or part of a building.

2) Prior to demolition, building owners must determine if there is any asbestos-containing material(s) (ACM) in the building. An "asbestos inspection" by a DEP-licensed Asbestos Consultant is required for all buildings except single-family homes and residential buildings with 2-4 units built after 1980. In lieu of an asbestos inspection, pre-1981 residential buildings with 2-4 units can be surveyed to identify possible ACM by someone knowledgeable about ACM, such as a code enforcement officer or building inspector. If materials that may contain asbestos are found, then you can either assume they are ACM or hire a DEP-licensed Asbestos Consultant to test the materials.

3) Whenever more than 3 square feet or 3 linear feet of ACM is identified, the ACM must be abated in accordance with the Maine Asbestos Management Regulations by a DEP-licensed Asbestos Abatement Contractor. This includes materials presumed to be ACM. Check www.state.me.us/dep/rwm/asbestos/index.htm for a listing of asbestos contractors.

Prior to issuing a local demolition permit, the DEP requests that **municipalities** have applicants for municipal demolition permits complete this form and fax it to the DEP at 207-287-7826. Municipalities should not issue local demolition permits if the required asbestos inspection or survey has not been performed and identified ACM removed.

Were asbestos-containing materials found? yes no no inspection or survey required (post-1980 2-4 unit)

RE: Demolition/ Former Eagles Club

Dear John:

As per our recent telephone conversation, I **am** requesting a change in the amount of asbestos containing materials being removed by demolition equipment (see attached variance) at the former Eagles Club in Portland, Maine. As we discussed, the initial intent was to remove approximately 2,000 square feet of friable asbestos containing ceiling utilizing “conventional means” and the remaining material with demolition equipment. The area containing the 2,000 square feet is rain soaked (roof leaks) and the three layers of ceiling pose a significant risk to workers inside the building. Areas of ceiling have fallen and my fear is that as soon as we start to remove the ceiling by hand the remaining will collapse. Also, the plywood floor (floor tile underneath) is rotted and is unsafe.

Therefore, I would request that we be allowed to remove the roof and the interior of this building under the existing variance and simply increase the amount being removed. The work plan, methods and disposal will remain the same.

The demolition work is scheduled to begin on June 13,2005. I have enclosed the modified work plan and original variance for your review.

I you have any questions please call me at **458-0038**.

Sincerely;

Alex McCarthy
President

**Former Eagles Club
Phase One and Two
Maine Medical Center**

MES # 05016

OVERVIEW

This portion of the project includes the removal of approximately 3,500 square feet of friable ceiling material, 2,000 square feet of floor tile and 3,500 square feet of roof material. A regulated area with wet removal method, remote shower decon and the utilization of large equipment shall be utilized for abatement. Work shall be conducted between the hours of 0700 and 1530 hours, Monday thru Friday (date to be determined).

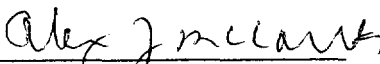

SSMEN

A section of the interior of the building has collapsed and is unsafe to work in. This section of the building has an asbestos containing ceiling which is now scattered through out the area. All interior components of this part of the building will be treated as asbestos waste and disposed of accordingly. Utilizing large equipment, we will attempt to remove the interior and leave the exterior walls standing. If during demolition, the exterior walls collapse and fall into our work area all debris will be treated as asbestos waste. **All asbestos related activities will be conducted by a licensed asbestos contractor.**

WORK PLAN

1. Establish regulated area.
2. Erect and attach a three chambered shower decon to the work area as shown on the attached diagram. Clean room should be >32 square feet. Utilize water from building located on 48-52 Gilman Street to provide water to the decontamination unit and work area.
3. Inside the regulated area, abatement worker to wear full body disposable suits, leather/rubber gloves, rubber boots and full face PAPR respirators with 99.97% efficient cartridges during removal.
4. The heavy equipment will be placed outside the regulated area with the arm of the equipment extending into the area. All demolition workers will receive asbestos awareness training in accordance with OSHA 29 CFR Part 1926.1101 (effective August 10, 1994). If the heavy equipment is placed inside the regulated work area workers will be trained in accordance with above mentioned OSHA regulation.
5. Air monitoring for the project will be conducted as follows:
 - A. Area background samples prior to removal.
 - B. Full shift personal sampling during removal. Include an S.T.E.L. sample during daily monitoring. This will include the heavy equipment operator as well as the workers inside the regulated area.
 - C. Full shift downwind area sampling inside and outside of the regulated area during removal.
6. In a wet state, remove existing roof deck exposing interior of the space.
7. In a wet state, remove interior of building, **all waste shall be treated as friable asbestos** and placed into an opened topped, double lined 30 yard dumpster.

8. If visual emissions are observed during demolition, work shall *cease* until engineering controls are in place to prevent visible emissions.
9. Secure top of dumpster for transport. Disposal of friable asbestos waste will occur at a landfill licensed to accept asbestos waste.
10. Fine clean all interior surfaces of the building utilizing a combination of HEPA vacuuming and wet Wiping techniques. Included in the site clean up **will** be the demolition equipment.
11. Independent hygienist will conduct **final** visual inspection.
12. If visual passes, deregulate.
13. **Upon** completion of deregulation, Project Manager **shall** conduct **final** post removal visual inspection. Leave no visible asbestos waste.
14. If area is clean, demobilize.
