To the building inspector,

I am in need of a building permit to replace an old 25,000 gal Milk Silo with a new silo of the same size. I have attached a separate check sheet as several items on your check sheet are not applicable to my project and I was not able to mark them as such. I hope it is acceptable, otherwise please let me know and I will provide the correct form

There is no construction work needed to do the replacement.

Would it be possible to expedite the permit, as the silo is arriving on Jan 15th 2014?

It would be greatly appreciated

Best Regards

Richard Seiler
