UNHEATED BUILDINGS

Additional measures are required when using a FPSF on an unheated building. While a drainage layer is only recommended under wing insulation for heated buildings, a 6-inch drainage layer is always required under unheated FPSF designs. Additionally, the horizontal ground insulation extends not only as a wing beyond the perimeter of the building, but continues under the entire unheated portion of the building. This insulation layer can be installed either directly under the slab as shown in Figure 18, or entirely at one level as shown in Figure 19. In either case, the compressive load of the building on the insulation must be determined to compare to the compressive resistance of the foam (see design examples). The horizontal insulation must have a minimum of 10 inches of soil cover.
