Hi Barbara,

Thank you for your help the other day. Please see the attach AAA and the latest copy of our Construction Drawings. As we discussed on the phone, there should be no clearing of trees or increase in impermeable surfaces associated with this project. Previous drafts of the site sketch showed a 4' wide path being created to the road, but our site visit showed that that would not be necessary. There is no undergrowth in the forest there, and the site is easily accessible from the road with the small amount of equipment we are installing on the water tank. The ground equipment will be installed on platforms placed on a 6' x 6' bed of crushed rock.

I will be submitting the BP application to Building Inspections shortly as well.

Thank you very much,

Ryan Rodel
