Mono X® NeON LG300N1C-B3

60 cell

Introducing Mono X® NeON module series, which uses highly efficient n-type materials, an elaborate process control adopting a semiconductor processing solution and a double-sided structure. Our R&D concentrates on developing a product that is not only efficient, but strives to increase practical value for customers.

Photovoltaic Modules

N-Type Material

Mono X® NeON uses n-type cells, boasting higher mobility of electric charge, resulting in higher generation efficiency.

Near Zero LID (Light Induced Degradation)

The n-type cells used in Mono X® NeON have almost no boron, which may cause the initial efficiency to drop, leading to less LID.

Nano Level Control

Mono X® NeON uses the Nano-level process control predominant in semiconductor processing process, which ensures less electric loss from internal defects.

Double-Sided Cell Structure

The rear of the cell used in Mono X® NeON is designed to contribute to generation; the light beam reflected from the rear of the module is reabsorbed to generate a great amount of additional power.

16.8kg Light Weight | Convenient Installation | EL Test | Current Sorting | 25yrs Linear Warranty | 0~+3% Positive Power Tolerance

About LG Electronics

LG Electronics is a multinational corporation committed to expanding its capacity with solar energy business as its future growth engine. Our a solar energy source research program was launched in 1985, backed by LG Group's rich experience in semi-conductors, LCD, chemistry and electronic materials industry. We successfully released the first Mono X® series to the market in 2010 which exported to 32 countries in 2 years. In 2013, Mono X® NeON won "Intersolar Award", which proved its leading innovation in the industry.
