**Re: Site Name: Portland 6 ME
25 Church Ave
Peaks Island, ME 04108**

Dear Sir or Madam,

Dewberry Engineers Inc. (Dewberry) visited the above site on November 5, 2013 for a physical site assessment for the proposed Verizon Wireless installation. Verizon's scope of work consists of adding (6) antennas, (3) remote radio heads and (1) surge protector inside the existing steeple at the above referenced site. The antennas are to be mounted to the wall using angles and lag bolts to the existing timber.

The load of the proposed Verizon Wireless antennas and associated equipment are an increase in load on the existing timber structure. However, our review concludes that the proposed increase in load does not represent an increase of greater than 5% of the existing loading and is therefore acceptable.

Our assessment is based on the assumption that the existing structure is in good condition. If during construction any damage or deterioration is noticed, Dewberry is to be notified to assess any deviation from the assumed condition.

If you have any questions, please do not hesitate to call me at 617-531-0742.

Sincerely,
Dewberry Engineers Inc.

Brenden Alexander, P.E.
Senior Project Manager
