Brad,

This is a unique project, being done by the owner at a snails pace in between his work schedule. The amendment is for a change in the type of foundation materials and some framing.

These types of jobs are atypical, however the work has most likely not ceased in some form for more than 6 months. This does not mean that inspections are required every 6 months to avoid expiration. I have authorized this amendment to be submitted as the inspection notes required, and per my email communications as Rachel provided.

The next inspection is not until framing close in, although there will be subsurface inspections sooner.

Let me know if you have any questions and thanks for your due diligence.

Jeanie
