Good day,

Attached please find:

- Residential building permit application for a 8'x10' shed to be installed at 63 William Street Portland ME 04103 (signed)
- Plot Plan for 63 William Street denoting maximum footprint for shed (intended installation will be cornered at 5 feet from site boundaries in NW corner of property; maximum footprint of 12'x12' shown to accommodate tolerances and orientations, although intended orientation is 10-foot dimension parallel to William Street. Shed footprint is highlighted for visibility).
- Specifications for Arrow Dallas vinyl-coated metal shed 8'x10'
- Installation Manual for Arrow Dallas shed
- Specifications for Arrow floor system to be used with shed
- Installation Manual for Arrow floor system
- Specifications for Arrow anchor system to be used with shed
- Installation Manual for Arrow floor system

I believe the attached specifications and manuals, plus the following description, should be adequate for "construction drawing" requirements of the building permit application.

Site dimensions and building dimensions (with some refinements in incidental building dimensions from actual measurement) come from the Portland Maine Tax Assessor's online database for CBL 117D021 (63 William Street). Site boundary is shown in solid lines; boundaries between pavement and garden/grass areas within the site are shown in dashed lines. Entire North and West side/back yards are paved. Structure will be placed on existing pavement (though for discussion, "north" is away from William Street). North arrow is provided. Setback of 5' from each site boundary is shown in solid lines with small perpendicular marks. Setback to adjacent structures on William and Oakdale streets are shown with hashmarks and labeled. One square is approximately 4 feet; original scale was 1" = 16'. Foundation will be existing blacktop pavement with Arrow floor frame and plywood flooring.

Correct ownership is currently in the Assessor's database.

Thank you,
Todd Angerhofer
