Portland, Maine

Copy to: Mr. Moses F. Arnold
233 Concord Street

Dear Mrs. Kennedy:

Being aware of your desire to get the work started as soon as possible, we are issuing herewith to you building permit for enclosing a portion of an open porch on the West Street side of your dwelling at 452 Deering Avenue and for removal of a section of the wall between the existing kitchen and the enclosed porch although information showing full compliance with Building Code requirements has not as yet been furnished. The permit is issued, however, subject to the conditions listed below and if you are unwilling or unable to provide the construction indicated, no work is to be started and the permit is to be returned to this office for adjustment. Conditions under which the permit is issued are as follows:

1. Mr. Arnold in answer to our letter of November 9th has said that he will provide a 4x8 header on a 12' span over the opening to be made in the existing wall of the building. If the opening is to be that wide, the 4x8 header is not adequate to take care of the loads involved. No less than a 4x12 dressed Douglas Fir or Long Leaf Yellow Pine timber is required on this span to do the job. We understood from your description of your plans that the width of the opening is to be only about 9', but even on this span the 4x8 indicated will not figure out. On the basis of a 7-foot span no less than a 4x10 dressed Douglas Fir timber is required over the opening. Therefore this permit is issued on the basis that a 4x10 dressed Douglas Fir header will be used if the opening is to be not over 9' wide or a 4x12 dressed Douglas Fir will be used if the span is to be as much as 12' wide. If you wish to use some other size timber than those indicated, approval of the size to be used is to be secured from this department before the work is started.

2. Notification is to be given this department for an inspection before the header or any of the enclosing walls are covered from view.

Very truly yours,

Warren McDonald
Inspector of Buildings

AP 452 Deering Avenue-I

November 9, 1951

Mr. Moses P. Arnold
268 Concord Street
Portland, Maine

Copy to: Mrs. M. G. Kennedy
452 Deering Avenue

Dear Mr. Arnold:

An application for a building permit giving you as contractor has been filed to enclose an existing open porch on the Prospect Street side of the building at 452 Deering Avenue. Upon inquiry we find that besides enclosure of the porch, removal of a section of the existing outside wall of the building is contemplated in order to enlarge the existing kitchen, but no mention of this work is made in the application for the permit. Since the wall to be removed carries loads from the second floor and roof framing of the ell, a beam adequate in size to carry these loads will be needed across the opening to replace the wall to be removed. Information is needed as to the size of the beam which you propose to use in order that its adequacy can be checked before the permit for the work can be issued. Will you please furnish such information?

Very truly yours,

Warren McDonald
Inspector of Buildings

AP 452 Deering Avenue-I

October 7, 1947

Mr. Richard Jackson
13 Haphen Street
Mrs. Mabel Kennedy
452 Deering Avenue

Subject: Building permit for construction of
second story platform and stairway to the
ground at 452 Deering Avenue

Dear Madam & Sir:

There is not sufficient information on the application or the sketch accompanying it to show compliance with the Building Code, but rather than delay issuance of the permit longer, I am issuing it, herewith, to Mr. Jackson subject to the following conditions:

1. It is not allowable to support the corner posts for the new second story platform on the present first story platform, unless that existing first story platform has cedar post foundations or masonry pier foundations extending no less than 4' below the surface of the ground. If the first story platform does not have that type of foundations, then they must be provided before the superstructure of the new work proceeds. If masonry piers were used under the present platform, they are required to be no less than 8" x 3" at the finished surface of the ground, no less than 10" x 10" at the bottom of the pier, to extend no less than 4' below the finished surface of the ground and no less than 6" above the finished surface of the ground, the woodwork of the first story platform to be anchored to the piers by means of metal dowels cast into the concrete and let up into the timber or equivalent method.

2. I understand that one side of the second story platform will be against the present building and that the other three sides will be outlined by 4x6 timbers, set with the 6-inch dimension upright. At any rate, this is the construction that I understand you have put on the application. You also have shown 2x6 floor joists 16" on centers and on spans of 3 feet. This platform could be constructed somewhat lighter as to framing members but of course it is allowable to make it as heavy as you show.

3. The new stairway is required to be no less than 30" wide as is the platform at top and bottom. The risers of the stairs are required to be no more than 8½" and the treads no less in width than 9", this latter dimension to be measured from riser to riser. The stairway is required to have a handrail on at least one side full length from top to bottom. Care must be exercised so that the rise and tread of the stairs are substantially uniform.

4. The application says that the first floor platform is to have a cedar post foundation at least 4' below the grade, the cedar posts to be encased in 4" of concrete. I presume this refers to the new platform at the foot of the new stairs to be located not far from the garage door, and that this platform is to be framed in much the same manner as indicated for the second story platform. In this case the outlining members are required to be no less than 4x6, solid lumber in cross-section, and ought to be set with the 6-inch dimension upright.

5. I do not understand the reference to encasing the cedar posts in 4" of concrete. If the owner decides to use the cedar posts, that ought to be enough and I recommend that you use no concrete. If on the other hand she decides to use concrete piers, the cedar posts should not be used, but the piers constructed as outlined above for the existing first story platform.

October 7, 1947

6. The 2x4 stringers shown for the stairway are not strong enough on the projected span of 10'. No less than 2x6 should be used, the "points" spiked onto the stringers not being counted for strength. With stairs 3' wide, most builders would use 3-2x6 stringers—one against the building, one in the center and one on the outside which gives good stability for the stair treads. It is not clear from the sketch how the stair stringers are to be supported upon the lower platform or hung from the upper platform, but the contractor will have to be responsible for providing a permanent and workmanlike job in this connection.

If you are unable for any reason or unwilling to comply with the above conditions, please refrain from starting the work and contact this office.

Very truly yours,

Inspector of Buildings

APPLICATION FOR PERMIT FOR
HEATING, COOKING OR POWER EQUIPMENT

Portland, Maine, June 11, 1947

01382
JUN 11 1947

To the INSPECTOR OF BUILDINGS, PORTLAND, MAINE

The undersigned hereby applies for a permit to install the following heating or power equipment in accordance with the Laws of Maine, the Building Code of the City of Portland, and the following specifications:

Location 452 Deering Avenue Use of Building Dwelling No. Stories 2 New Building Existing "
Name and address of owner of appliance Mrs. Mabel G. Kennedy, 452 Deering Avenue
Installer's name and address Arthur Boulton, 21 Roberts Street Telephone W-2711

General Description of Work

To install Steam boiler (this is two in place of one)

IF HEATER, OR POWER BOILER

Memorandum from Department of Building Inspection, Portland, Maine

452 Deering Avenue-Installation of steam boiler for Mrs. Mabel Kennedy by
Arthur Boulton-6/14/47

To Installer:

If the statement on applications "To install steam boiler (this is two in place of one)." means that two boilers are to be installed now, will Mr. Boulton come in and pay additional fee of 50 cents for which I must account- the Code providing that fee shall be \$1.00 for each appliance except when more than one is to be installed in same building at approximately the same time, when only 50 cents shall be charged for each one beyond the first.

It is noted that the appliance or appliances are to be fired by oil. In the absence of any information about the oil burner, it is assumed that some party other than Mr. Boulton is to install the oil burning equipment. Installation of oil burning equipment is to be covered by application for separate permit to be filed by the actual installer and is usable only to him, permits to be secured before installation is started.

CC Mrs. Mabel Kennedy,
452 Deering Ave.

P. S. If two boilers are to be installed there is a question under Building Code as to connecting both to the single 8x8 flue indicated on the application, and installer of boilers should get it straightened out before starting the installation. See Section 601a2 of Building Code.

(Signed) Warren McDonald

Amount of fee enclosed? \$1.00 (\$1.00 for one heater, etc., 50 cents additional for each additional heater, etc., in same building at same time.)

APPROVED:

OK 6-11-47 J. F. Smith

Will there be in charge of the above work a person competent to see that the State and City requirements pertaining thereto are observed? Yes

To remove cupola and close ^{7"x10"} over - built up roof ^{layers} 3 ~~layers~~ 90% asphalt felt Class C

Memorandum from Department of Building Inspection, Portland, Maine

452 Deering Avenue, corner of Ashmont Street--Alterations to include foundation and floor for future sun parlor for Mrs. Mabel Kennedy by Robert A. Verrier, builder

8/11/44

To Builder & Owner:

With 10-foot depth of sun parlor the span, bearing to bearing, of 6x8 seems more like 10 feet than the 2-foot indicated on the application. On that basis the 6x8 would not work out unless it were of genuine hard pine or Douglas fir. If spruce or hemlock is proposed, the beam ought to be 6x10, 6x6 or similar. No less than 1x1 crossbracing should be used in each floor joist span.

CC: Mrs. Mabel Kennedy
452 Deering Avenue
