Family and friends love the party-sized J-385. What makes one house everybody's favorite hangout? The Jacuzzi Premium model J-385. This big, beautiful spa is the life of the party, whether guests are relaxing in its warm water or simply enjoying the calming sound of the two Water Rainbow waterfalls. 43 PowerPro jets and three highly efficient pumps stir up targeted massage action for each of the seats. In quieter moments, you will want to take full advantage of the Ultimate Lounger, an ergonomically designed seat that truly lives up to its name. Lots of space, special features, and superb performance make the J-385 (and your backyard) a popular choice.

Ideal Spa Covers  
 370 East Crowther Ave.,  
 Placentia CA 92690

Attn : James P. Brady

Subject : Safety Cover Approval per ASTM F 1346-91

Scope : SECO tested 2 lbs. and 1 lb. density foam vinyl spa covers manufactured by Ideal Spa Covers. Both of these are 8' x 8' with a 4' to 2" tapered design from center to side. The following test data results represents both submitted samples.

Specification : ASTM F 1346 - 91

Source : Submitted to Laboratory by Client.

### Report of Tests

#### Section 9 - Test Methods for Safety Covers (ASTM F 1346-91)

##### 9.1 Static Load Test

A 275 pounds weight test object distributed on a 1 sq.ft. area was placed on center of the covers and remained there for 5 minutes.

##### Observations

- a.) Normal Specified Load - Test object causes no damage to cover and fastening hardware.
- b.) Requested by Client for a 100% overload (550 pounds) - Test object causes no damage to cover and fastening hardware.

##### 9.2 Perimeter Deflection Test

With a 50 lbs. weight about 4' from the side of the cover, a perimeter test object (ellipsoidal shape about 37 lbs.) was placed right on the side of the cover and test if it can gain access to the water.

- The cover had no appreciable deflection to allow the perimeter test object pass through or be trap between cover and side of the spa.
- This test procedure did not cause any damage to fastening hardware.

##### 9.3 Surface Drainage Test

Surface drainage test object (About 37 lbs.) was placed on the cover 2' to 3' and parallel with the spa edge. Water was sprayed for 30 minutes (at 10 gal/min. per 1000 sq.ft. of pool area).

- Observation shows no water being collected where the drainage test object is located. For a period of three minutes there is no unsafe amount of water to cover the test object. All water drains out because of the tapered design allowing any water to flow.
- This test procedure did not cause any damage to fastening hardware.

Page 2

*Spa Cover Test contd' (ASTM F 1346-91)*

**9.4. Opening Test**

The cover was installed completely covering the entire spa with approximately 4" apron. It also have lockable harness to secure the cover.

- Solid sphere test object (4.5" max. dia.) was placed on an opening and a force of 40 lbs. (±1 lb.) was applied steadily to test if it can pass through the cover.

Opening Location	Observations
Bet. Cover & Spa Control Panel	Test object can not pass through and cause no damage to fastening hardware.
Der. Cover Joint Section & Spa	Test object can not pass through and cause no damage to fastening hardware.

**Section 9 - Remrks :**

Both submitted samples falls under "Manual Safety Cover" classification (Section 4 - Cover Classification). They were constructed of high density foam insulation with galvanized steel channel reinforcement and covered with leather like vinyl. Lockable harness (base screwed in wood frame) secures the cover to remain on top of the spa.

**Section 8 - Label Requirements**

The submitted products conforms to this section and its subparagraphs.
