Hi Christina,

There are existing lag bolt taps directly into the I Beam which are the mount points for the existing signage that hangs in the same place. We will be utilizing those same taps to affix the mount points of the steel reinforced raceway that the actual Neon is affixed to.

Thanks for your time & attention; let me know if you need more info.

Best,
-birch

Hi Birch,

One question on your sign permit application, you state that the neon sign in front will be "directly affixed" to the I-beam, do you have any information on exactly what they will use to attach it?

Thanks,

Chris
