Demolitions and Asbestos

To: Code Enforcement Officers and Municipal Officials
From: Ed Antz, Asbestos/Lead Hazard Prevention Program
Subject: Asbestos Issues During Building Demolitions
Date: September 2000

1) Overview

In Maine, building demolitions happen on a regular basis. Many of the demolitions occur in older buildings that are likely to containing some asbestos products, particularly in or on heating (HVAC), wall floor, and ceiling systems. These demolition projects may be happening without the proper protection of employees, the general public, and the environment. It is important to remember that state and federal laws require that owners have buildings inspected and have any asbestos products properly removed prior to demolition. The Maine DEP is forwarding this information to municipal officials in an effort to increase awareness of and compliance with applicable rules, resulting in less asbestos exposure to the general public, demolition site personnel, and the environment.

2) What Can Municipalities Do To Help?

Municipalities can greatly assist the people of Maine and the Department by joining with the DEP and the US EPA to ensure that asbestos is properly managed during demolitions. Specifically, municipalities can hand out appropriate information, issue demolition permits only to persons who can demonstrate that they will properly handle the asbestos, and mail or fax the building demolition (BDF) report form to the Department. The following check-off list can be used:

- A) Provided "Asbestos Fact Sheet" to Applicant
B) Had applicant fill out "Building Demolition Form" (BDF)
C) Did not issue Demolition Permit to Applicant not answering "Yes" to three questions on BDF Form (OPTIONAL BUT SUGGESTED)
D) Municipality faxed (or mailed) BDF Form to DEP at 287-7826.

3) What Are The Rules?

Simply stated, state and federal asbestos rules and regulations require that buildings be inspected for asbestos products and have them removed prior to demolition. The inspection and removal operations must be performed by DEP-licensed companies under regulated and controlled conditions.

4) Using The Building Demolition Report Form

The purpose of this form is to ensure that an applicant has the correct information to properly remove asbestos from a building prior to demolition. The form asks three questions and records some basic information that the DEP may need during follow-up inquiries. The Form has two parts which need to be filled out by the applicant. The first section on the Form, Pre-Demolition Building Inspection and

Demolition Fact Sheet

Contact: phone (207)-287-2651

This Fact Sheet provides a brief overview of the regulatory requirements pertaining to asbestos demolition activities in Maine. This document addresses the basic requirements. Should you require detailed information or have a specific question, please call (207) 287-2651.

What is Asbestos?

Asbestos is naturally occurring mineral, very strong and heat resistant, which has been made into nearly three thousand products. It is found on heating and domestic water systems (pipes, boilers, gaskets, tanks, elbows and tees), spray-on insulation (fireproofing and acoustical purposes), flooring components (vinyl tiles and linoleum) and drop-in ceiling systems (ceiling tiles). Asbestos-containing materials (ACM) are also found in building materials, such as siding (shingles or sheets) and roofing, used on the outside of buildings.

When do Maine's Asbestos Regulations apply?

Any (single) demolition activity that involves the removal of ACM in quantities greater than 3 square or 3 linear feet is subject to the requirements of 38 M.R.S.A. Title 38 Sections 1271 to 1284 (Maine statute) and Chapter 425, Asbestos Management Regulations (DEP regulation). Demolition means the tearing down or intentional burning of a building or part of a building. This includes any institutional, commercial, public, industrial or residential building. **Be advised that Maine and federal regulations require that all ACM be removed from a building (or affected portions thereof) before it is completely or partially torn down.**

What are Maine's requirements?

Maine regulations require that notification of the demolition activity be sent to the Department 10 days prior to the activity; that companies performing the removal be licensed with the Department; that individuals working for the licensed companies be certified with the Department; that the work be performed under controlled conditions (specific work practices consisting of reduced pressure enclosures and wet methods) by properly protected employees; and that inspection, project design and clearance standards (air testing) be met. Finally Maine regulations require that asbestos be properly stored in fiber-tight containers, be transported by DEP-permitted vehicles, and be disposed in a landfill licensed to accept the type of waste generated (friable or non-friable).

What are the Federal Asbestos requirements?

The federal government under the National Emissions Standards for Hazardous Air Pollutants (NESHAPs) also regulates asbestos demolitions. Specifically, the NESHAPs requires that facilities be inspected thoroughly for asbestos products, that the owner/operator notify the federal government 10 days prior to the project, and that friable asbestos (any loose, crumbly material) be removed prior to demolition. The federal government and the Department have worked out an agreement that allows notification to the Department to constitute notification to the federal government as well. All demolitions, asbestos-containing or not, must be reported, excluding residential units (<5).

Simply, What Can I Do To Be In Compliance?

As soon as possible before demolition, building owners need to hire an asbestos consultant or asbestos contractor (with consulting experience) to inspect and make recommendations about demolition options. An up to date list of asbestos companies is available from the Department as is technical assistance following inspection.
