

The roof and porch were damaged by a large tree that fell during storm on 10/29/17.

The upper roof rake will be rebuilt with wood trim and metal edging and the roof replaced with dark gray architectural shingles.

The 7.25' x 21' (152.25 sf) porch will be rebuilt in the same location with the same materials: wood railings, post, roof joists, and trim. The porch roof will match the upper roof shingles. The new porch decking will match existing composite decking.

The lowest step on the existing stairs meets the back side of the sidewalk. The porch is currently 12' from the road curbing, 4.6' from sidewalk, 14.25' +/- from the left side property line and 19.75' +/- from the right side property line. The rebuilt porch will be the same size as pre-existing porch.
