

**Sec. 14-440. Exterior egress.**

Notwithstanding any other provision of this Code, the building authority may permit the installation of an exterior egress stair or an upgrade of an existing exterior fire escape for a conforming or lawfully nonconforming dwelling unit existing as of January 5, 1998, if such egress is required to meet current fire or other life safety codes, provided that the owner demonstrates to the building authority that:

- (1) There is no practical and economically reasonable way to provide such egress within the interior of the building, as demonstrated by the submission of detailed floor plans showing the projected cost of and the impact on the existing dwelling from an interior stair;
- (2) The stairway and associated landings and other building fixtures are designed and will be constructed to have a minimal visual impact upon the building, especially as viewed from any public way or public open space, as demonstrated by photographs of the front and any other affected facades of the building and plans or drawings of the proposed egress stairs;
- (3) Reductions to setbacks granted under this section shall be the least amount required to meet life safety code requirements; and
- (4) Exterior stairways on buildings subject to regulation under article IX of this chapter shall require review and approval under the provisions of that article.
