

Building Inspections,

11/13/2013

In your process of inspecting the building located at 1025 Forest Avenue Portland, Maine. I would like to take the time to point out features that may help with your approval of the permit 201302470. The building being leased is a mortar, blocks construction using steel trusses to support a wood roof covered in membrane. Entrances to the store are located front and rear. Both entrances are well lite by pole lamps located in the parking lots. Upon exit these same two entrances are lite with exit signs and passage lights. In combination emergency lights are installed to accenting these exits in the event of a power failure.

Looking at the electrical service supplied from a pole located in the parking lot exiting to Forest Ave. The service is rated 200 amps, three phases, 208 voltages. The electrical panel is 42 space, flush mounted. This panel supplied lighting, heat, cooling, and general purpose outlets within the store.

Other features found are two bathrooms, one office and a combination office janitor room. These rooms are lite using florescent lighting in a suspended ceiling. The water and sewer provided are by public utilities.

The information provided should help in the process of approval of the permit. We are very excited to become a part of your business community and look forward to completing the building permit process. Should you have any additional questions I can be reached at 978-886-1188 between the hours of 8 Am to 6 PM Monday through Friday.

Thank you

Gunjan Patel
