To the Portland Building Department and Deputy Director Jonathan Rioux,

Please find attached below my application for to line the boiler flues at 241 Walton St. on behalf of the owners Alicia Curtis and Kathleen Pratt.

There are two separate single flue unlined chimneys, one each in the center of either side of the 2 family home. Each vents a single oil boiler.

My intention is to install a single 6" diameter Ultrapro stainless steel liner in each chimney flue, including tee and tee cap at the bottom and a top plate and cap at the top, lined continuously from the oil burners' connector pipe to the top of the chimney.

Neither pre-existing boiler nor connector pipe will be changed except to vent through the stainless steel liner, nor will the chimneys be altered.

To complete the installation, the breech will be bricked up as before the installation to seal the chimney.

I have scheduled with Ms. Curtis and Ms. Pratt to install these liners on Thursday, March 10th. If that is too soon, I can reschedule the installation.

Will you want to inspect when all the work is complete or would you prefer to see the liners installed, but before I close the breech with masonry?

Respectfully,

Billy
